

**DESCRIPTION**

The LXMG221W-0700034-D0 is a fully enclosed compact solid-state LED lighting driver module. It operates from a universal AC input supply in the range of 100V<sub>AC</sub> to 277V<sub>AC</sub>, 50/60Hz to drive a string of LEDs with active power factor correction. LED string voltage can range from 14V to 48V at a constant current of 700mA to drive a wide variety of LED lamp string requirements.

Control terminal leads include a dimming input BRITE\_A with a dedicated RETURN lead. The amplitude of the output LED string current will vary from 10% to 100% corresponding to a 1V<sub>DC</sub> to 10V<sub>DC</sub> signal on the BRITE\_A input following the 0V to 10V ESTA E1.3-2001 Analog Control Specification Standard. The BRITE\_A terminal when pulled down below minimum dimming will turn off the LEDs and enter a low power consumption mode.

To reduce audible noise the internal switching frequency remains above 30kHz. Safety features include open output circuit protection, whole string short circuit protection. The maximum allowable hot spot case temperature is 90°C (above this temperature the module will be thermally self-protected). The recommended operating ambient temperature range is -30°C to 70°C, as long as the maximum case temperature is not exceeded. The compact enclosure is rated to IP66, meets UL8750 and UL1310 class 2, CE pending.
