# Ultra-Low On-Resistance and Compact Bidirectional Battery Switch 

General Description
The MAX14634 bidirectional battery switch features reverse blocking capability to isolate the battery from the system. The internal switch features ultra-low $7 \mathrm{~m} \Omega$ (typ) on-resistance and operates from a +2.3 V to +5.5 V input voltage range, making this device ideal as a batterydisconnect switch for high-capacity battery applications. The slew-rate controlled switch is also ideal for a large load capacitor as well as high-current load switching applications.
The device is available in an ultra-small 12-bump (1.3mm $\times 1.7 \mathrm{~mm}, 0.4 \mathrm{~mm}$ pitch) WLP package. The tiny, lowprofile package is suitable for space-limited portable device applications. The device operates over the $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ extended temperature range.

## Applications

Tablet PC Battery Switches
Smartphone Battery Switches
Battery Isolators

## ABSOLUTE MAXIMUM RATINGS

| (All voltages referenced to GND.) |  |
| :---: | :---: |
| PWRA, PWRB, $\overline{\text { EN }}$ | -0.3V to +6V |
| Current into PWRA, PWRB | $\pm 5 \mathrm{~A}$ |
| Continuous Power Dissipation ( $\left.\mathrm{T}_{\mathrm{A}}=+70^{\circ} \mathrm{C}\right)$ |  |
| WLP (derate $13.7 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $+70^{\circ} \mathrm{C}$ ) | 1096mW |

Operating Temperature Range .......................... $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$
Maximum Junction Temperature..................................... $+150^{\circ} \mathrm{C}$
Storage Temperature Range............................ $65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$
Soldering Temperature (reflow)
$+260^{\circ} \mathrm{C}$

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## PACKAGE THERMAL CHARACTERISTICS (Note 1)

WLP
Junction-to-Ambient Thermal Resistance $\left(\theta_{\mathrm{JA}}\right) \ldots . . . . . . .73^{\circ} \mathrm{C} / \mathrm{W}$
Note 1: Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a fourlayer board. For detailed information on package thermal considerations, refer to www.maxim-ic.com/thermal-tutorial.

# Ultra-Low On-Resistance and Compact Bidirectional Battery Switch 

## Detailed Description

The MAX14634 is a bidirectional switch with ultra-low $7 \mathrm{~m} \Omega$ (typ) on-resistance and reverse-current blocking capability. The device has low quiescent current and operates from $\mathrm{a}+2.3 \mathrm{~V}$ to +5.5 V input voltage range, making this device ideal as a battery-disconnect switch for highcapacity battery applications. The slew-rate controlled switch is also ideal for a large load capacitor as well as high-current load switching applications.

## Reverse-Current Blocking

The bidirectional FET switch prevents current flowing from either power input to the other when the switch is disabled.

## $\overline{E N}$ Input

The switch position is controlled by an $\overline{E N}$ active-low logic input. The switch is on when EN is logic-low and off when $\overline{\mathrm{EN}}$ is logic-high. $\overline{\mathrm{EN}}$ is internally pulled down to ground by RPD.
