

# High Reliability Hallogic® Hall Effect Sensor

## Types OMH3020B, OMH3020S

### Features

- Lead finish is hot solder dip
- Hermetic ceramic package
- Operates over a broad range of supply voltages
- Excellent temperature stability to operate in harsh environments
- Hall element; linear amplifier; and Schmitt trigger on a single Hallogic® silicon chip
- Processing patterned after class B or class S of MIL-STD-883
- Suitable for military and space applications

### Description

The chip contains a monolithic integrated circuit which incorporates a Hall element, a linear amplifier, and Schmitt trigger on a single silicon chip. Included on-chip is a bandgap voltage regulator to allow operation with a wide range of supply voltages. The device features logic level output and is capable of 25 mA of sink current. Output amplitude is constant at switching frequencies from DC to over 200 kHz.

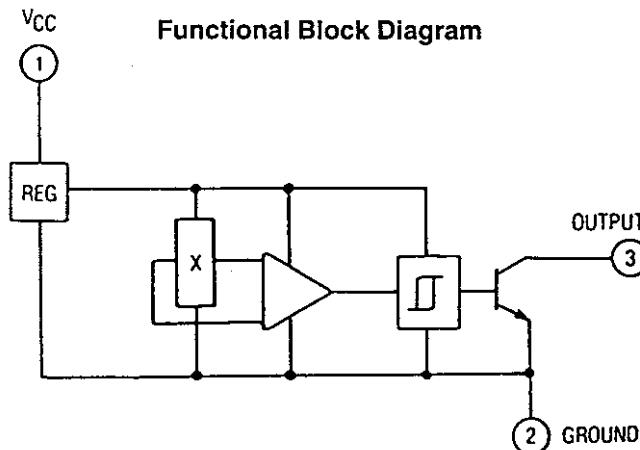

The OMH3020B is processed to Optek's own screening procedures patterned after class B of MIL-STD-883.

OMH3020S is patterned after class S. Typical screening and lot acceptance tests are provided on page 13-4.
