100250 Quint Full Duplex Line Transceiver

General Description

The 100250 is a quint line transceiver capable of simultaneously transmitting and receiving differential mode signals on a twisted pair line. Each transceiver has a signal input S_{IN} , a signal output S_{OUT} and two differential line inputs/outputs L and \bar{L} . Signals received from the lines L and \bar{L} can be stored in an internal latch. The line outputs are designed to drive twisted pair lines. The $ENABLE$ input is common to all five transceivers.

Features

- Full duplex operation
- Common mode noise immunity of $\pm 1V$

Ordering Code: See Section 6

Note 1: Unless specified otherwise on individual data sheet

Note 2: Parametric values specified at -4.2V to -4.8V

Note 3: The specified limits represent the "worst case" value for the parameter. Since these "worst case" values normally occur at the temperature extremes, additional noise immunity and guard banding can be achieved by decreasing the allowable system operating ranges.

Note 4: Conditions for testing shown in the tables are chosen to guarantee operation under "worst case" conditions.
