

FEATURES

- 14-bit resolution; 10MSPS sampling rate
- Functionally complete; $\pm 2.5V$ input range
- No missing codes over full temperature range
- Edge-triggered
- $\pm 5V$ supplies, 1.6 Watts
- 76dB SNR, $-83dB$ THD
- Ideal for both time and frequency domain applications

PRODUCT OVERVIEW

The ADSD-1410S is a functionally complete, dual 14-bit, 10MSPS, sampling A/D converter. Its standard, 40-pin, triple-wide SMT DIP contains two fast-settling sample/hold amplifiers, two 14-bit A/D converters, multiplexed output buffers, a precision reference, and all the timing and control logic necessary to operate from either two or a single start convert pulse.

The ADSD-1410S is optimized for wideband frequency-domain applications and is fully FFT tested. The ADSD-1410S requires only $\pm 5V$ supplies and typically consumes 1.6 Watts. The digital output power supply is capable of directly driving 5V or 3V logic systems. Models are available in either commercial 0 to $+70^{\circ}C$ or military -55 to $+125^{\circ}C$ operating temperature ranges.

FUNCTIONAL BLOCK DIAGRAM

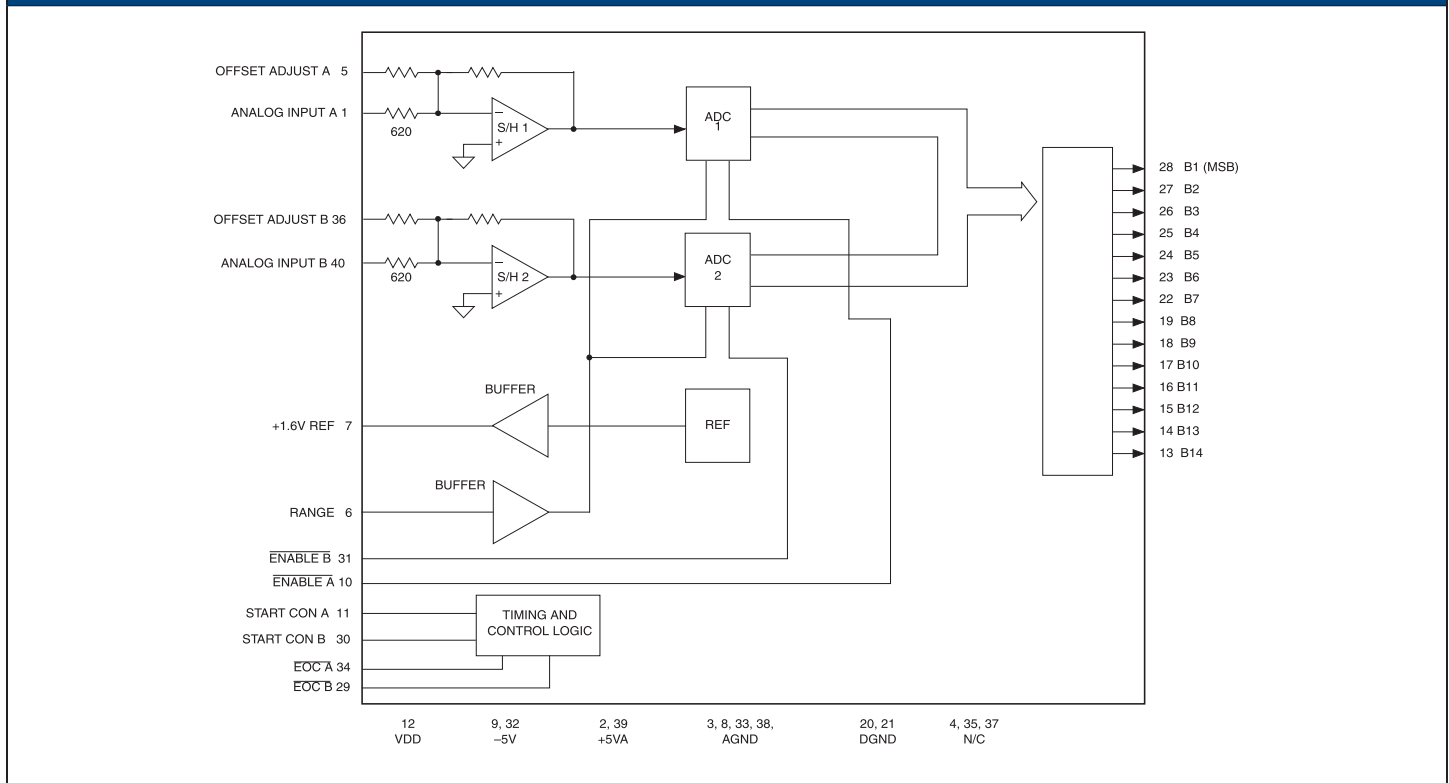

Figure 1. ADSD-1410S Functional Block Diagram

PARAMETERS	LIMITS	UNITS
+5Vcc Supply (Pins 2, 39)	0 to +6	Volts
-5VEE Supply (Pins 9, 32)	0 to -6	Volts
VDD Supply (Pin 12)	-0.3 to (VCC +0.3)	Volts
Digital Inputs (Pins 10, 11, 30, 31)	-0.3 to (VDD +0.3)	Volts
Analog Input (Pins 1, 40)	±7	Volts
Lead Temp. (10 seconds)	+300	°C

FUNCTIONAL SPECIFICATIONS

(TA = +25°C, VCC = +5V, VDD = +5V, VEE = -5V, 10MSPS sampling rate, Vin = ±2.5V and a minimum 7 minute warmup unless otherwise specified.)

ANALOG INPUTS	MIN.	TYP.	MAX.	UNITS

TECHNICAL NOTES

1. Rated performance requires using good high-frequency circuit board layout techniques. Connect the digital and analog grounds to one point, the analog ground plane beneath the converter. Due to the inductance and resistance of the power supply return paths, return the analog and digital ground separately to the power supplies.

CALIBRATION PROCEDURE

1. Connect the converter per Figure 3. Apply a pulse of 50 nanoseconds typical to START CONVERT (pin 11) at a rate of 2MHz. This rate is chosen to reduce flicker if LED's are used on the outputs for calibration purposes.
2. **Zero (Offset) Adjustments**
Apply a precision voltage reference source between ANALOG INPUT A (pin 1) and SIGNAL GROUND (pin 3), then adjust the reference source output per Table 2. Adjust trimpot R1 until the code flickers equally between 10 0000 0000 0000 and 10 0000 0000 0001.
3. Repeat above step for Analog Input B (Pin 40). Use trimpot R2 for the zero (Offset) adjustment .

Table 2. Offset Adjustment

INPUT RANGE	OFFSET ADJUST +1/2 LSB
±2.5V	+0.000153V

Table 3. Output Coding

OUTPUT CODING MSB	LSB	INPUT RANGE ±2.5V	BIPOLAR SCALE
11	1111 1111 1111	+2.499695	+FS - 1LSB
11	1000 0000 0000	+1.875000	+3/4FS
11	0000 0000 0000	+1.250000	+1/2FS
10	0000 0000 0000	±0.000000	0
01	0000 0000 0000	-1.250000	-1/2FS
00	1000 0000 0000	-1.875000	-3/4FS
00	0000 0000 0001	-2.499695	-FS+1LSB
00	0000 0000 0000	-2.500000	-FS

4. To confirm proper operation of the device, vary the precision reference voltage source to obtain the output coding listed in Table 3.

5 nSec. per division

THERMAL REQUIREMENTS

The ADSD-1410S sampling A/D converter is fully characterized and specified over the commercial operating temperature (ambient) range of 0 to +70°C and military temperature range of -55 to +125°C (EX suffix). All room-temperature ($T_A = +25^\circ\text{C}$) production testing is performed without the use of heat sinks or forced-air cooling. Thermal impedance figures for each device are listed in their respective specification tables.

These devices do not normally require heat sinks, however, standard precautionary design and layout procedures should

be used to ensure devices do not overheat. The ground and power planes beneath the package, as well as all pcb signal runs to and from the device, should be as heavy as possible to help conduct heat away from the package. Electrically-insulating, thermally-conductive "pads" may be installed underneath the package. Minimal air flow over the surface can greatly help reduce the package temperature.
