Asea Control Safety switches

Asea Control Safety switches

Asea Control safety switches provide the sense of security that is so essential when repair and maintenance work is being done on electrical equipment. An Asea Control safety switch operates reliably, has contact position indication you can trust, and can be padlocked, eliminating the risk of accidents due to unauthorised starts. Asea has a complete range of these switches, all designed for the ultimate in safety.

A range to meet every need

The Asea Control range of safety switches is comprehensive, with a wide choice of options for various fields of application. The range extends up to operating voltages of 660 V, rated operating current AC-23 16-630 A. Safety switches up to 100 A rating are available in triple-pole or six-pole versions. Switches above 63 A rating will accept both copper and aluminium cables. The enclosure is made of polycarbonate, sheet steel or light alloy. Special variants to meet the requirements and regulations of various countries are also available.

Convenient and simple to use

Asea Control safety switches are very simple to use, so simple that they really do get used! What's more, they are easy to operate, with clear position indications and a smooth operating mechanism.

Easy to install

The enclosure have generous connection spaces in which even heavy aluminium cables can easily be connected using the new cable clamp. Connections can be made from above or below.

Where both incoming and outgoing cables enter from below, larger sizes of switch can be fitted with an extra connection unit, available as an accessory. This makes connecting the cables extremely easy.

Asea Control Apparatus

Asea offers a complete range of modern low-voltage controlgear called Asea Control. The Asea Control range includes contactors, relays, pushbuttons, monitors, limit switches, load switches, safety switches, starters and circuit-breakers for various applications. The range also features electronic devices such as time relays, soft starters and arc monitors.

ASEA DISTRIBUTION

Asea Control Safety switches

The safety switches are designed, among other things, to conform to the following standards:
IEC 408, SS 428 06 05, KY 11979 and VDE 0113.

Approval (where such is required) from:
SEMKO; DEMKO; NEMKO; Elektriska Inspektoratet (Finland);
For comprehensive data, refer to Catalogue SK 34-1E.
