# 1. Application

The display is a TFT active matrix electrophoretic display, with associated interface and control logic, and a reference system design.

The 5" active area contains 800x600 pixels, and has full 1~4 bit display capabilities

An integrated circuit containing interface, timing and control logic is supplied with each panel.

#### 2. Features

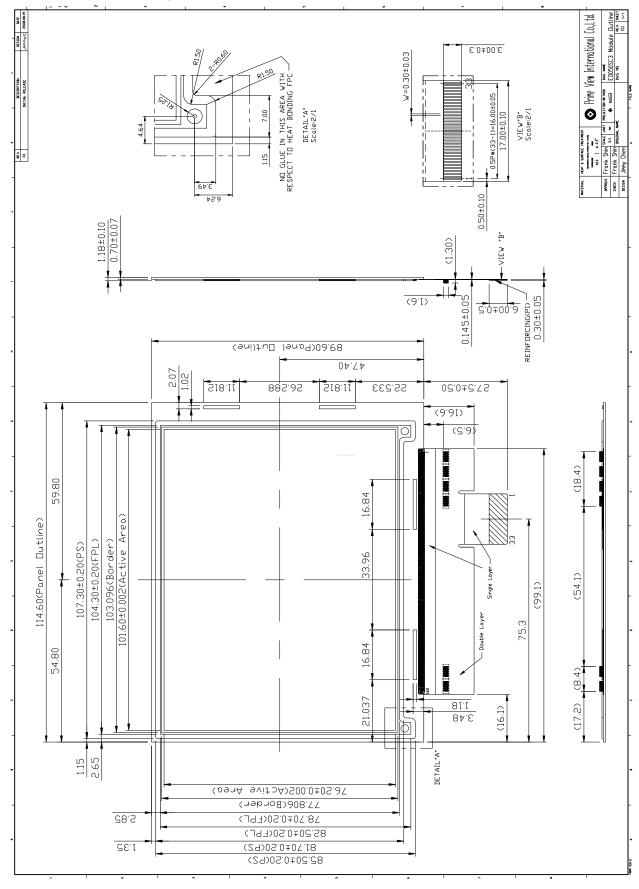

- ➤ High contrast TFT electrophoretic
- ➤ 800x600 display
- ➤ High reflectance
- > Ultra wide viewing angle
- > Ultra low power consumption
- > Pure reflective mode
- ➤ Bi-stable
- ➤ Commercial temperature range
- ➤ Landscape, portrait mode
- ➤ Antiglare hard-coated front-surface

#### **6.Electrical Characteristics**

# 6-1) Panel interface description

This panel is driven by ASIC PVI-6001A or "Apollo" display controller ASIC. See control product specification for details.

## 6-2) Absolute maximum rating

Maximum image update time at 25°C			-	1000	-	ms

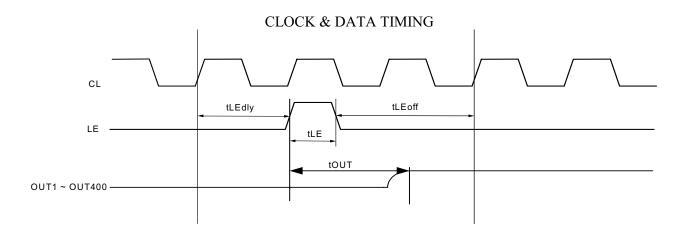

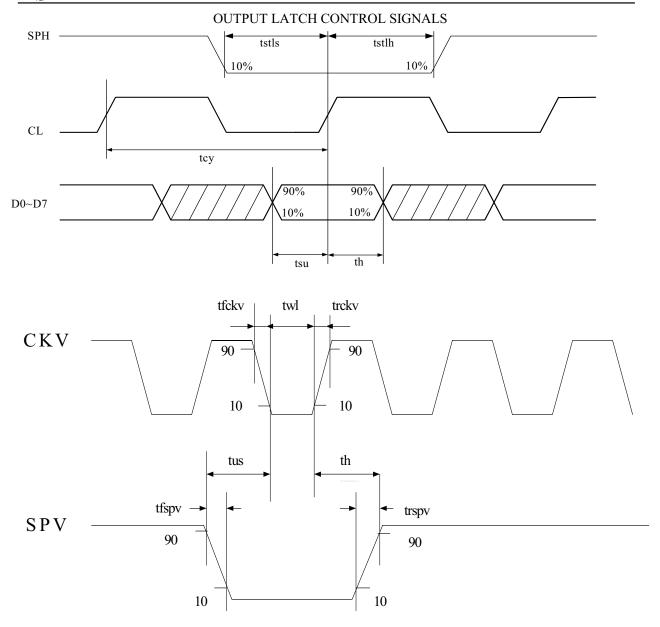

- The maximum power and maximum currents are specified for the worse case power consumption. This occurs when 2 horizontal inverted stripped images are displayed
- The typical power is the consumed power when "typical images" are displayed.
- The standby power is the consumed power when the panel controller is in standby mode.
- The listed electrical/optical characteristics are only guaranteed under the controller & waveform provided by PVI
- Vcom is recommended to be set in the range of assigned value  $\pm$  0.1V

## 8. Optical characteristics

#### 8-1) Specifications

Measurements are made with that the illumination is under an angle of 30 degrees, the detection is perpendicular unless otherwise specified.

#### 8-2) Definition of contrast ratio

The contrast ratio (CR) is the ratio between the reflectance in a full white area (Rl) and the reflectance in a dark area (Rd):

CR = R1/Rd

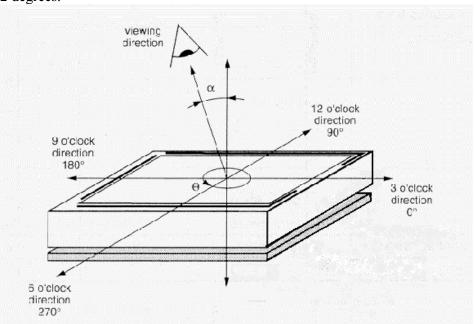

#### 8-3)Reflection Ratio

The reflection ratio is expressed as:

$$R = Reflectance \ Factor_{white \ board} \quad x \quad \left( \ L_{center} \ / \ L_{white \ board} \right)$$

 $L_{center}$  is the luminance measured at center in a white area (R=G=B=1).  $L_{white\ board}$  is the luminance of a standard white board. Both are measured with equivalent illumination source. The viewing angle shall be no more than 2 degrees.

 $\alpha = declination / \theta = azimuth$ 

#### 9. HANDLING, SAFETY AND ENVIROMENTAL REQUIREMENTS

#### WARNING

The display glass may break when it is dropped or bumped on a hard surface. Handle with care. Should the display break, do not touch the electrophoretic material. In case of contact with electrophoretic material, wash with water and soap.

#### **CAUTION**

The display module should not be exposed to harmful gases, such as acid and alkali gases, which corrode electronic components.

Disassembling the display module can cause permanent damage and invalidate the warranty agreements.

Observe general precautions that are common to handling delicate electronic components. The glass can break and front surfaces can easily be damaged. Moreover the display is sensitive to static electricity and other rough environmental conditions.

#### **Limiting values**

Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

#### **Application information**

Where application information is given, it is advisory and does not form part of the specification.
