AK5384 Evaluation Board Rev.A

GENERAL DESCRIPTION

AKD5384 is an evaluation board for the digital audio 24bit 96kHz 4ch A/D converter, AK5384. The AKD5384 includes the input circuit and also has a digital interface transmitter. Further, the AKD5384 can achieve the interface with digital audio systems via opt-connector.

■ **Ordering guide**

AKD5384 --- AK5384 Evaluation Board

FUNCTION

- **DIT with optical output**
- **BNC connector for an external clock input**

Figure 1. AKD5384 Block Diagram

* Circuit diagram and PCB layout are attached at the end of this manual.

■ **Operation sequence**

1) Set up the power supplies lines.

[AVDD]	(red)	= 4.75 ~ 5.25V	: for AVDD of AK5384 (typ. 5.0V)
[DVDD]	(red)	= 4.75 ~ 5.25V	: for DVDD of AK5384 (typ. 5.0V)
[TVDD]	(orange)	= 3.0 ~ 5.25V	: for TVDD of AK5384 (typ. 5.0V)
[+15V]	(green)	= +15V	: for Op-amp
[-15V]	(blue)	= -15V	: for Op-amp
[VCC]	(red)	= 5V	: for logic
[AGND]	(black)	= 0V	: for analog ground
[DGND]	(black)	= 0V	: for logic ground

Each supply line should be distributed from the power supply unit.

2) Set up the evaluation mode, jumper pins and DIP switches. (See the followings.)

3) Power on.

The AK5384 and AK4101 should be reset once bringing SW1 = “L” upon power-up.

Note: When the AK5384 is TDM mode, the AK4101 does not support TDM mode. So, PORT1 (DIT1) and PORT2 (DIT2) are not used. PORT3 (DSP) should be used.

■ **Evaluation mode**

(1) Slave Mode

(1-1) A/D evaluation using DIT function of AK4101

PORT1 (DIT1) and PORT2 (DIT2) are used. DIT generates audio bi-phase signal from received data and which is output through optical connector (TOTX176). It is possible to connect AKM’s D/A converter evaluation boards on the digital-amplifier, which equips DIR input. Nothing should be connected to PORT3 (DSP). In case of using external clock through a BNC connector (J5), select EXT on JP8 (CLK) and short JP5 (XTE) and open JP10 (EXT).

(1-2) Feeding all clocks from PORT3 (DSP)

Under the following set-up, all external clocks (MCLK, BICK, LRCK) can be fed through PORT3 (DSP). The A/D converted data is output from SDTO1/SDTO2 of PORT3 (DSP). Also, the A/D converted data is output through optical connector (TOTX176).

(2) Master Mode

(2-1) A/D evaluation using DIT function of AK4101

PORT1 (DIT1) and PORT2 (DIT2) are used. DIT generates audio bi-phase signal from received data and which is output through optical connector (TOTX176). It is possible to connect AKM's D/A converter evaluation boards on the digital-amplifier, which equips DIR input. Nothing should be connected to PORT3 (DSP). In case of using external clock through a BNC connector (J5), select EXT on JP8 (CLK) and short JP5 (XTE) and open JP10 (EXT).
