

**HIGH SENSITIVITY HALL EFFECT LATCH****Features**

- 3V to 28V DC operation voltage
- Chopper stabilized
- Wide operating voltage range
- Built-in power reverse protection
- Built-in voltage overshoot protection
- Output short circuit protection
- Open drain pre-driver
- SIP3 and SC59 (Commonly known as SOT23 in Asia)  
: Available in "Green" Molding Compound (No Br, Sb)
- Lead Free Finish/RoHS Compliant (Note 1)

**General Description**

AH3761 is an integrated Hall effect latched sensor designed for electronic commutation of brush-less DC motor applications. The device includes an on-chip Hall voltage generator for magnetic sensing, a comparator that amplifies the Hall voltage, and a schmitt trigger to provide switching hysteresis for noise rejection, and open drain output. An internal bandgap regulator is used to provide temperature compensated supply voltage for internal circuits and allows a wide operating supply range.

If a magnetic flux density larger than threshold  $B_{op}$ , DO is turned on (low). The output state is held until a magnetic flux density reversal falls below  $B_{rp}$  causing DO to be turned off (high).

**Application**

- Brush-less DC Motor Commutation
- RPM Detection
- Consumer and industrial position sensor
- Flow meters

**Typical Application Circuit**

$t_{ST}$	Start-up time of IC	$V_{dd} > 3\text{V}$ , $B > B_{op}$ (Note 6)	-	47	-	$\mu\text{s}$

- Notes:
- The device will shut down operating after the output current  $I_O$  is over the output current limit  $I_{OM}$  for 160 $\mu\text{s}$  (typically). The device will re-start up operating after resetting the supply voltage  $V_{dd}$ .
  - $I_n$  initial power on time, the output state is kept in "High" in this start-up time of IC.
  - Typical data is at  $T_A = +25^\circ\text{C}$ ,  $V_{dd} = 24\text{V}$  and is design information only.

**LIFE SUPPORT**

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
