

BXA15 SERIES

Wide Input Telecom DC/DC Converters

- 3" X 2.4" X 0.5" Package With Standoffs
- Designed to Meet EN60950 2nd Edition, UL1950, EN41003, UL1459 2nd Edition
- Internal Implementation of VDE0871-A and IEC801-2
- Fixed Frequency Operation at 350 kHz
- MTBF in Excess of 1,000,000 Hours
- Pin Compatible with WR30, WR/XC and WR/U Series
- Efficiencies up to 84%
- 9-18V, 18-36V & 36-75V Input Voltage Ranges
- Two Year Warranty

Conceived as an application specific range of DC/DC Converters, the BXA15 Series key markets are telecoms, industrial electronics, test equipment, mobile communications and computer distributed power systems. Each of the products has been

tailored to meet end user needs thus simplifying design-in, reducing approval lead times and ensuring long term reliable operation in International markets.

SPECIFICATIONS

All specifications are typical at nominal line, full load and 25°C unless otherwise noted.

Design Notes:

- (1) An optional internal filter is available, which will meet VDE Level A, VDE0878 Level A and EN55022 Level A. Add the suffix "-F" to the model number. Example: **BXA-48S12-F**
- (2) For extended operating temperature include heatsink option, "1" in the model number. Maximum heatsink height is 12.5mm. Example: **BXA-48S15-1**
- (3) Conducted noise to VDE0871 Level B and EN55022 Level B may be achieved by putting a capacitor across the input pins. Recommended capacitor: 24V & 48V Input: 24+48 Nippon Chemi-Con 220 μ F, 100V SXE series, 12 V Nippon Chemi-Con 2700 μ F, 25V LXC Series
- (4) Reverse voltage protection can be implemented by putting a fast blow fuse on the positive input rail. Rate the fuse for 48VDC at 2A; 24VDC at 4A; 12VDC at 8A.
- (5) Output voltage trim:

- (6) The maximum operating ambient temperature, without derating depends on internal power dissipation and hence efficiency and cooling method. The actual efficiency will depend on the operating conditions but will be within 3% of the typical efficiency specified. An accurate determination of maximum operating ambient temperature is only possible if the actual internal power dissipation and the subsequent rise in baseplate temperature of the unit is calculated for each application.
