

SSC9502

Controller IC for Current Resonant Type Switching Power Supply with Half-Bridge Resonance, High Efficiency and Low Noise

General Descriptions

The SSC9502 is a controller IC, incorporating a floating drive circuit for half-bridge type resonance. The product achieves high efficiency and low noise power supply systems by the ZVS and ZCS. The product is recommended for high-efficiency small and standardized power supplies because of easy circuit designs with few external components.

DIP-16

Features

- Soft-Switched Multi-Resonant Zero Current Switch (SMZ)
The zero-current switching (ZSC) and zero-voltage switching (ZVS) of half-bridge type resonance achieve the high efficiency and low noise systems.
- Automatic Dead Time Adjustment Function for Wide Resonant Conditions
- Burst-Oscillation Function
The function enables the stable output control at no load to light load conditions and improves the efficiency.
- Soft-Start Function
- Brown-In / Brown-Out Function
The function enables the oscillation start /stop by externally rated input voltage and makes protections at low input voltage.
- External Latch Protection (ELP)
The function enables the latch shutdown by external signal.
- Various Protections

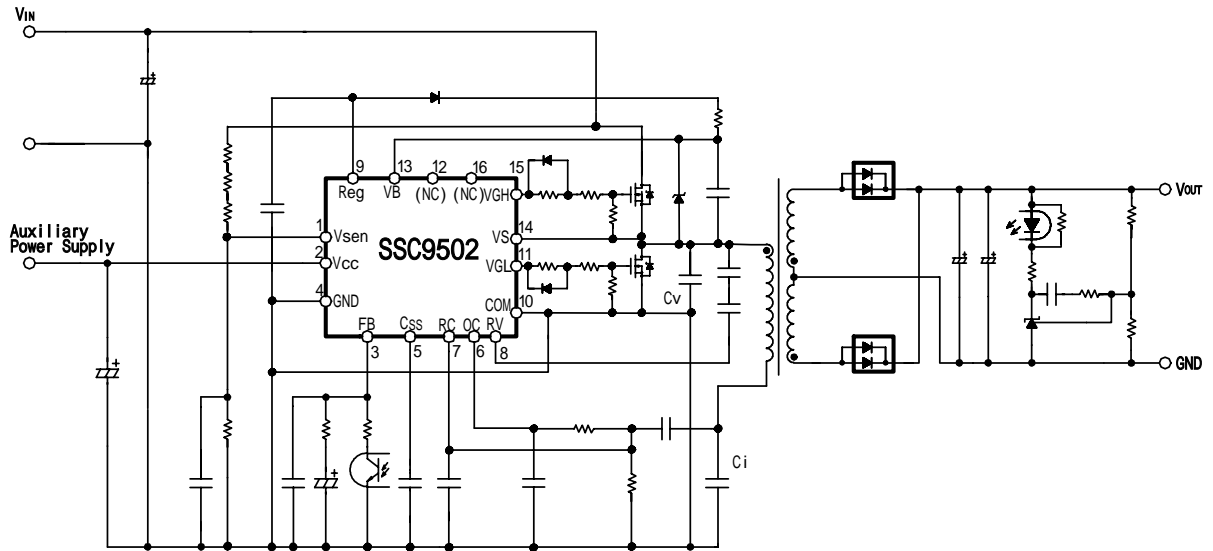

Overcurrent Protection (OCP)-----	Auto-Restart
	Three-step protections depending on overcurrent status
Overload Protection (OLP)-----	Latch Shutdown
Overvoltage Protection (OVP)-----	Latch Shutdown
External Latch Protection (ELP) -----	Latch Shutdown
Thermal Shutdown Protection (TSD)-----	Latch Shutdown

Applications

Switching Power Supplies for

Digital Consumer Equipment; LCD-TVs, PDP-TVs, etc.,
OA Equipment; Servers, Multi-Function Printers, etc.,
Industry Machines, Communication Devices, Others

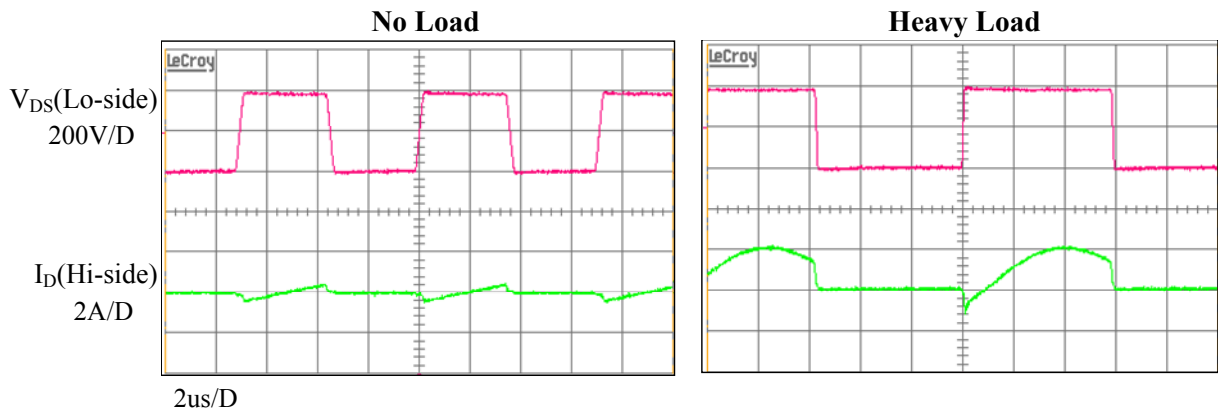

Typical Application Circuit

Typical Electrical Characteristics and Operation Waveforms

Power Supply Characteristics

Input : DC380V, Output : 24V/8.5A (204W), with Power MOSFET $R_{DS(ON)}$: 0.56 Ω
