

3 dB 90° Card Couplers

HD-M Series

■Features

1.High Performance

The high frequency characteristics feature. Extremely low loss and a high degree of matching.

2.Power Uniform Distribution and 90° Phase Difference Type

This is a one input, two output (or two input, one output) power uniform distribution type having a 90° phase difference between the two outputs (or two inputs).

3.Miniature and Lightweight

Corrosion-resistant aluminum is used for the cover and the Hirose Electric original pattern design, which uses a stripline triplate method, enables the couplers to be extremely small and lightweight.

4.Equipped with Tabs

Tabs permit direct mounting to surface circuits.

5.High Power Type

This type can be used with up to 100 W of power.

■Product Specifications

Ratings	Frequency range (Note) Characteristic impedance Maximum Input Power (Note)	30 to 6400 MHz 50 ohm 50 to 100 W	Operating temperature range Operating relative humidity	-10°C to +65°C 95% Max.
---------	--	---	--	----------------------------

Note: The frequency range and the maximum input power will differ depending on the products.

Item	Standard	Conditions
1.Insulation resistance	500M ohms min	100 V DC
2.Vibration	No damage, cracks, or parts dislocation	Frequency of 10 to 2000 Hz, overall amplitude of 1.52 mm, acceleration of 98 m/s ² for 2 hours in each of 3 directions
3.Shock	No damage, cracks, or parts dislocation	Acceleration of 980 m/s ² , sine half-wave waveform, 3 cycles in each of the 3 axis
4.Temperature cycle	No damage, cracks, or parts dislocation	Temperature : -55°C → +5°C to +35°C → +85°C → +5°C to +35°C Time : 30 → 15 max. → 30 → 15 max. (Minutes) 5 cycles
5.Corrosion resistance	No serious corrosion	Exposed to 20% salt water solution for 48 hours
6.Hydrogen sulfide gas	No serious corrosion	Exposed to 10% potassium sulfide solution for 100 hours

●The test method conforms to MIL-STD-202.

■Materials

Part	Material	Finish
Cover (A)	Stainless steel	—
Cover (B)	Aluminum	Conductive white Alumite
Board	Dielectric	Gold plating
Rivets	Aluminum	—
Eyelet	Brass	Nickel plating
Tabs	Phosphor bronze	Gold plating
Cover (A)	Stainless steel	—
Cover (B)	Stainless steel	—

Typical Data

Temperature Test Data <HD-1800M3-CH(40)>

■ Mounting Method

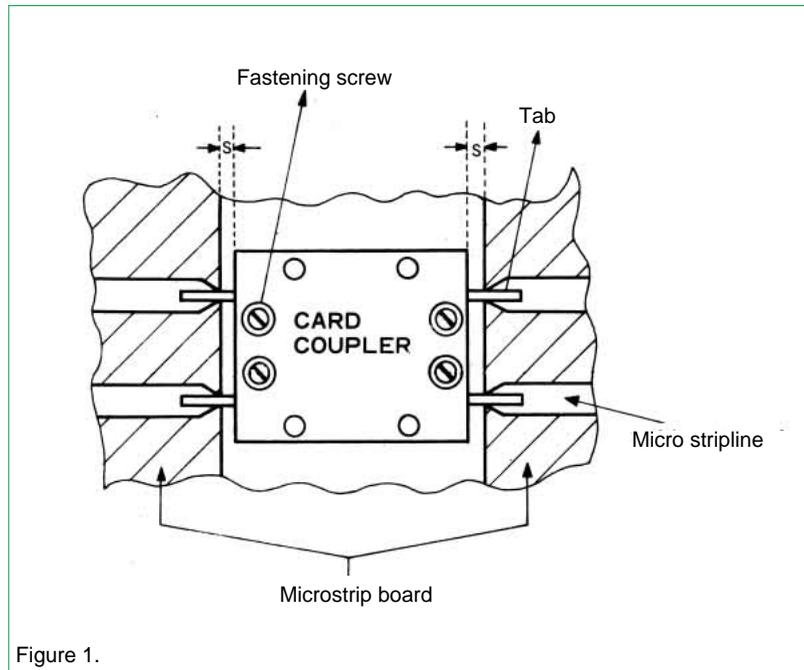

Figure 1.

The three types of mounting methods illustrated in the diagrams below will mount the card coupler for use under optimum conditions.

The fastening screws in the diagrams are M2 screws tightened to 1.5 kg · cm. When the tip of the micro stripline is of fluoropolymer material ($\epsilon_r = 2.6$), C chamfering of C1 is performed at t1.6, and of C0.5 at t1.2.

The side view diagrams of Figure 1 are illustrated in Figures 2, 3, and 4 below. Gap S between the card coupler and the microstrip board surface should be used to agree with the following conditions.

Below 500 MHz	$S \leq 0.5$ mm
500 to 2300 MHz	$S \leq 0.25$ mm
Above 2300 MHz	$S \leq 0.15$ mm

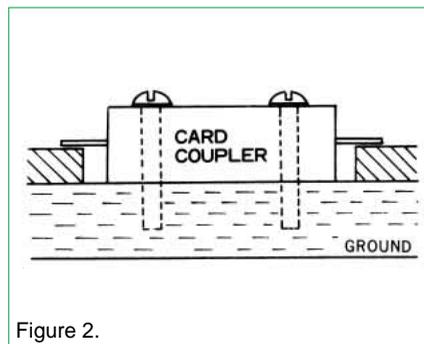

Figure 2.

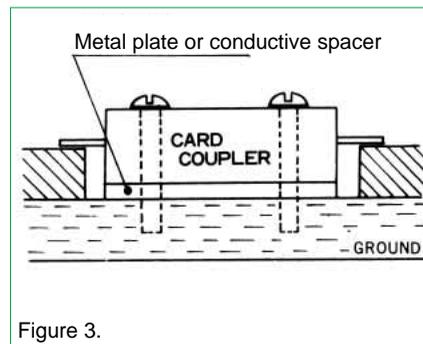

Figure 3.

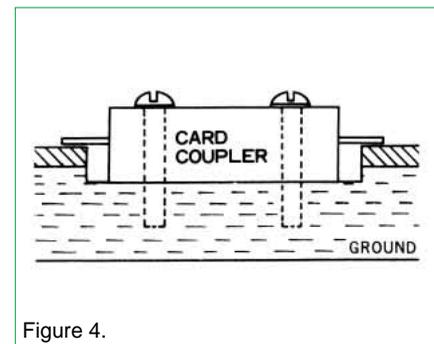

Figure 4.

● When the Ground Board is Constructed of 0.4 mm Stainless and 0.8 mm Aluminum

(When the Thickness of the Microstrip Board is 1.6 or 1.2 mm)

For t1.6 boards, use with the stainless case of the card coupler facing upward. For t1.2 boards, use with the aluminum case of the card coupler facing upward. Mount and fix the card coupler with fastening screws as illustrated in Figure 2. Next, solder the tabs and micro stripline, then use.

(When the Thickness of the Microstrip Board is Greater than 1.6 mm)

Insert a metal plate or a conductive spacer between the coupler and ground, then mount as illustrated in Figure 3 so that the surface of the tabs and the position of the microstrip board are equal. Fix the card coupler with fastening screws as illustrated in Figure 3. Next, solder the tabs and micro stripline, then use.

(When the Thickness of the Microstrip Board is Less than 1.2 mm)

Cut the ground at the position of the coupler and attach so that the surface of the tabs is in contact with the micro stripline. Fix the card coupler with fastening screws as illustrated in Figure 4. Next, solder the tabs and micro stripline, then use.

For VE Items (in which Aluminum Is Used Above and Below the Ground Board and the Eyelets Protrude Beyond the Cover)

The height of the cover will be a value 0.1 mm less than one half of the overall thickness.

For Directional Card Couplers (HD-0900M (10 dB) and HD-0900M (20 dB), etc.)

The height of the cover will be a value 0.35 mm less than one half of the overall thickness.

(When Spacing H of the Micro Stripline Board and the Tabs is $0 \leq H \leq 0.3$ mm)

Fix the card coupler with fastening screws as illustrated in Figure 2.
Next, solder the tabs and micro stripline, then use.

(When Spacing H of the Micro Stripline Board and the Tabs is $H < 0$)

Insert a metal plate or a conductive spacer between the coupler and ground, then mount as illustrated in Figure 3 so that the surface of the tabs and the position of the microstrip board are equal. Fix the card coupler with fastening screws as illustrated in Figure 3. Next, solder the tabs and micro stripline, then use.

(When Spacing H of the Micro Stripline Board and the Tabs is $H > 0.3$ mm)

Cut the ground at the position of the coupler and attach so that the surface of the tabs is in contact with the micro stripline. Fix the card coupler with fastening screws as illustrated in Figure 4. Next, solder the tabs and micro stripline, then use.

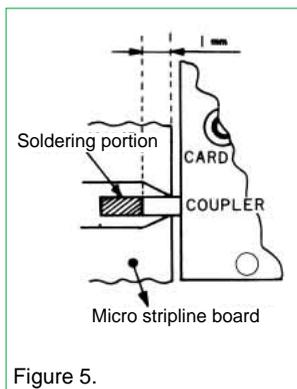

Figure 5.

At the time of soldering, solder with a space of 1 mm from the edge of the micro stripline as illustrated in Figure 5.
