APPLICATION SUGGESTION

The recommended values of the components are those shown on application circuit of fig. 1. Different values can be used ; the following table can help the designer.

Component	Recommended Value	Purpose	Larger than	Smaller than
R1, R3	1.2k Ω	Close Loop Gain Setting (1)	Increase of Gain	Decrease of Gain
R2, R4	18k Ω		Decrease of Gain	Increase of Gain
R5, R6	1 Ω	Frequency Stability	Danger of Oscillation at High Frequency with Inductive Load	
C1, C2	2.2 μ F	Input DC Decoupling	High Turn-on Delay	High Turn-on Pop. Higher Low Frequency Cut-off. Increase of Noise
C3	22 μ F	Ripple Rejection	Better SVR. Increase of the Switch-on Time	Degradation of SVR
C6, C7	220 μ F	Feedback Input DC Decoupling		
C8, C9	0.1 μ F	Frequency Stability		Danger of Oscillation
C10, C11	1000 μ F to 2200 μ F	Output DC Decoupling		Higher Low-frequency Cut-off

(1) The closed loop gain must be higher than 26dB.

BUILD-IN PROTECTION SYSTEMS

THERMAL SHUT-DOWN

The presence of a thermal limiting circuit offers the following advantages:

- 1) an overload on the output (even if it is permanent), or an excessive ambient temperature can be easily withstood.
- 2) the heatsink can have a smaller factor of safety compared with that of a conventional circuit. There is no device damage in the case of excessive junction temperature : all that happens is that P_o (and therefore P_{tot}) and I_o are reduced.

The maximum allowable power dissipation depends upon the size of the external heatsink (i.e. its thermal resistance); Figure 18 shows this dissippable power as a function of ambient temperature for different thermal resistance.

Short circuit (AC Conditions). The TDA2009A can withstand an accidental short circuit from the output and ground made by a wrong connection during normal play operation.

MOUNTING INSTRUCTIONS

The power dissipated in the circuit must be removed by adding an external heatsink.

Thanks to the MULTIWATT® package attaching

the heatsink is very simple, a screw or a compression spring (clip) being sufficient. Between the heatsink and the package it is better to insert a layer of silicon grease, to optimize the thermal contact ; no electrical isolation is needed between the two
