

# AZP52

## Low Phase Noise Sine Wave / CMOS to LVPECL Buffer / Translator

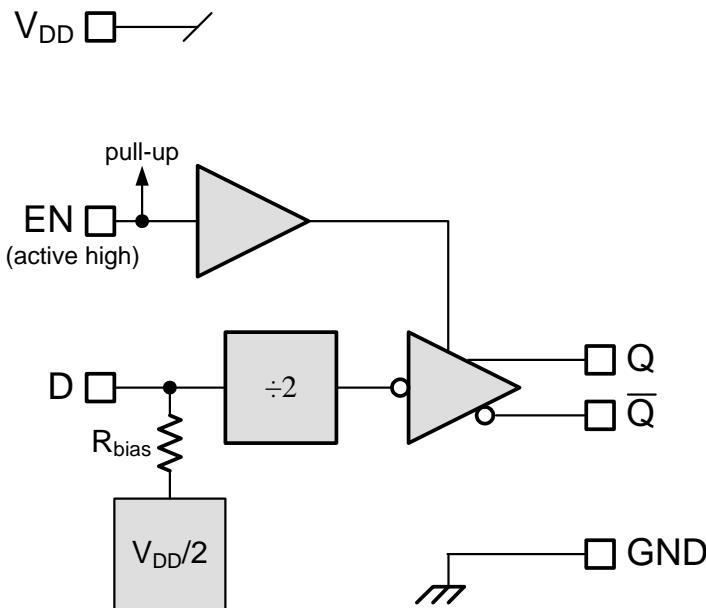

[www.azmicrotek.com](http://www.azmicrotek.com)

### DESCRIPTION

The AZP52 is a sine wave/CMOS to LVPECL buffer/translator optimized for very low phase noise (-165dBc/Hz). It is particularly useful in converting crystal or SAW based oscillators into LVPECL outputs greater than 800MHz of bandwidth. For greater bandwidth, refer to the [AZP63](#).

The [AZP52](#) is one of a family of parts that provide options of fixed  $\div 1$ , fixed  $\div 2$  and selectable  $\div 1$ ,  $\div 2$  modes as well as active high enable or active low enable to oscillator designers. Refer to Table 2 for the comparison of parts within the AZP5x and AZP63 family.

### BLOCK DIAGRAM

### FEATURES

- LVPECL outputs optimized for very low phase noise (-165dBc/Hz)
- Greater than 800MHz bandwidth
- Fixed  $\div 2$  output
- 3.0V to 3.6V operation

### APPLICATIONS

- PECL clock sources
- Crystal or SAW based oscillators with LVPECL output

### PACKAGE AVAILABILITY

- SC70-6
  - Green/RoHS Compliant/Pb-Free

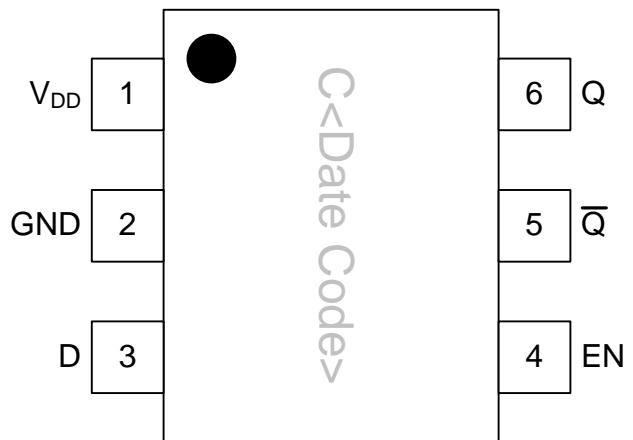

Order Number	Package	Marking
AZP52SG <sup>1</sup>	SC70-6	C <Date Code> <sup>2</sup>

<sup>1</sup> [Tape & Reel](#) - Add 'R1' at end of order number for 7in (1k parts), 'R2' (2.5k) for 13in

**PIN DESCRIPTION AND CONFIGURATION****Table 1 - Pin Description**

Pin	Name	Type	Function
1	V <sub>DD</sub>	Power	Positive Supply
2	GND	Power	Negative Supply
3	D	Input	Sine or CMOS Input
4	EN	Input	Enable
5	$\overline{Q}$	Output	LVPECL Output
6	Q	Output	LVPECL Output

**Figure 1 – Pin Configuration****ENGINEERING NOTES****FUNCTIONALITY**

The AZP52 is one of a family of parts that provide options of fixed  $\div 1$ , fixed  $\div 2$  and selectable  $\div 1$ ,  $\div 2$  modes as well as active high enable or active low enable to oscillator designers. Table 2 details the differences between the parts to assist designers in selecting the optimal part for their design.

Table 3 lists the specific AZP52 functional operation.

Figure 2 plots the S-parameters of the D input. [S-parameter](#) and [IBIS](#) model files for the AZP52 are also available for download.

**Table 2 - AZP51-54 & AZP63 Family**

Part Number	Divide Ratio	EN Logic	EN pull-up/pull-down	Bandwidth
AZP51	$\div 1$	active HIGH	Pull-up	> 800MHz
AZP52	$\div 2$	active HIGH	Pull-up	> 800MHz
AZP53	Selectable $\div 1$ or $\div 2$	selectable	selectable	> 800MHz
AZP54	$\div 1$	active LOW	Pull-down	> 800MHz
AZP63	Selectable $\div 1$ or $\div 2$	selectable	selectable	$\geq 1\text{GHz}$

Table 3 - AZP52 Functional Operation

Part Number	Inputs		Outputs	
	EN	D	Q	$\bar{Q}$

Figure 2- S11, Parameters, D Input

**INPUT TERMINATION**

The D input bias is  $V_{DD}/2$  fed through an internal  $10k\Omega$  resistor. For clock applications, an input signal of at least  $750mV_{pp}$  ensures the AZP52 meets AC specifications. The input should also be AC coupled to maintain a 50% duty cycle on the outputs. The input can be driven to any voltage between 0V and  $V_{DD}$  without damage or waveform degradation.

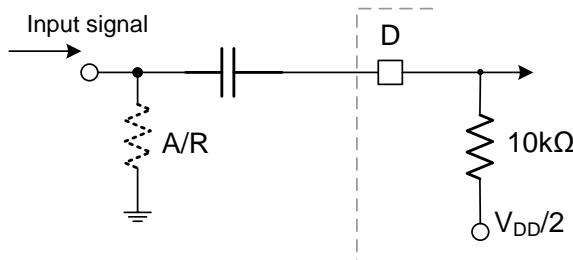

Figure 3 - Input Termination

**OUTPUT TERMINATION TECHNIQUES**

The LVPECL compatible output stage of the AZP52 uses a current drive topology to maximize switching speed as illustrated below in Figure 4. Two current source PMOS transistors (M1-M2) feed the output pins. M5 is an NMOS current source which is switched by M3 and M4. When M4 is on, M5 takes current from M2. This produces an output current of 5.1mA (low output state). M3 is off, and the entire 21.1mA flows through the output pin. The associated output voltage swings match LVPECL levels when external  $50\Omega$  resistors terminate the outputs.

Both Q and  $\bar{Q}$  should always be terminated identically to avoid waveform distortion and circulating current caused by unsymmetrical loads. This rule should be followed even if only one output is in use.

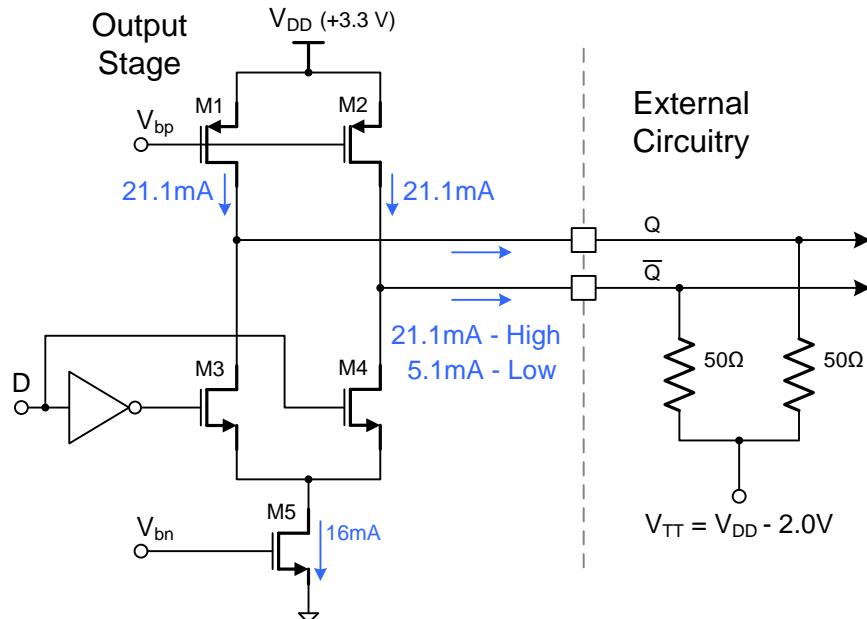

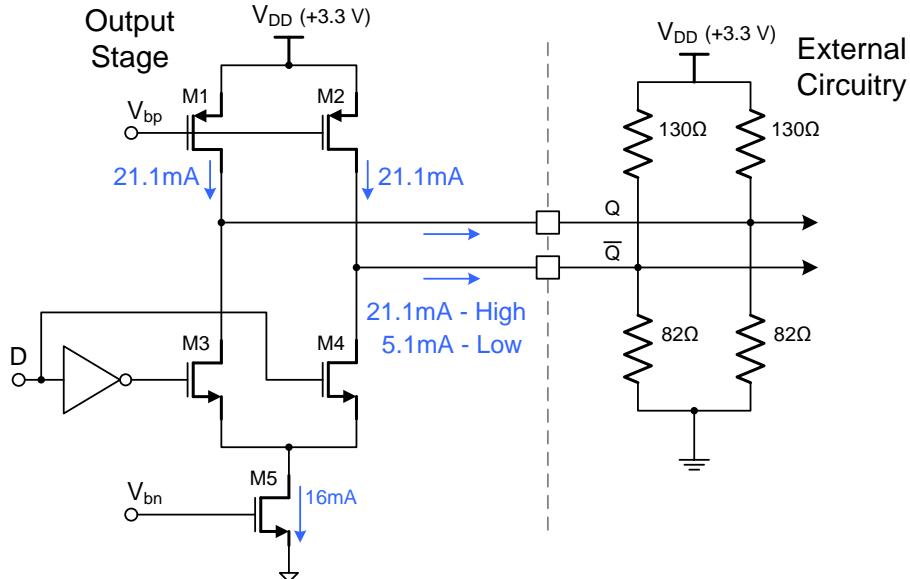

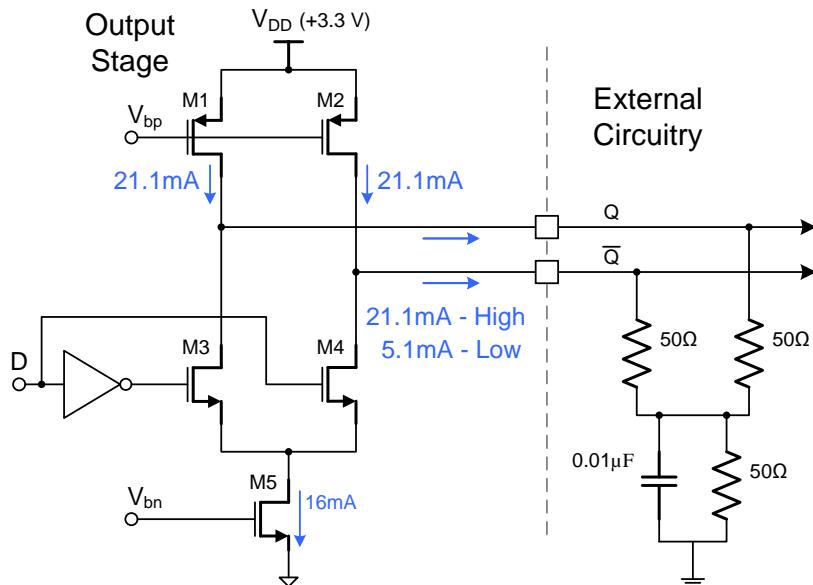

Figure 4 - Typical Output Termination

**DUAL SUPPLY LVPECL OUTPUT TERMINATION**

The standard LVPECL loads are a pair of  $50\Omega$  resistors connected between the outputs and  $V_{DD}-2.0V$  (Figure 4). The resistors provide both the DC and the AC loads, assuming  $50\Omega$  interconnect. If an additional supply is available within the application, a four resistor termination configuration is possible (Figure 5).

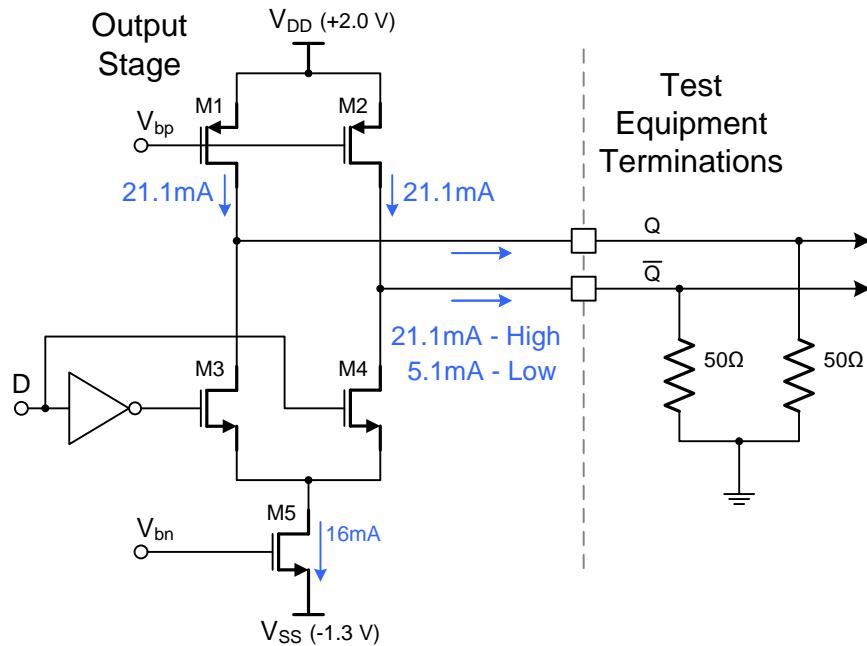

**Figure 5 - Dual Supply Output Termination****THREE RESISTOR TERMINATION**

Another termination variant eliminates the need for the additional supply (Figure 6). Alternately three resistors and one capacitor accomplish the same termination and reduce power consumption.

**Figure 6 - Three Resistor Termination**

**EVALUATION BOARD (EBP53)**

Arizona Microtek's evaluation board EBP53 provides the most convenient way to test and prototype AZP52 series circuits. Built for the AZP53Q 1.5x1.0 mm package, it is designed to support both dual and single supply operation. Dual supply operation ( $V_{DD}=+2.0V$ ,  $V_{SS}=-1.3V$ ) enables direct coupling to  $50\Omega$  time domain test equipment (Figure 7).

**Figure 7 - Split Supply LVPECL Output Termination**

**AC TERMINATION**

Clock applications or phase noise/frequency domain testing scenarios typically require AC coupling. Figure 8 below shows the AC coupling technique. The  $200\Omega$  resistors form the required DC loads, and the  $50\Omega$  resistors provide the AC termination. The parallel combination of the  $200\Omega$  and  $50\Omega$  resistors results in a net  $40\Omega$  AC load termination. In many cases this will work well. If necessary, the  $50\Omega$  resistors can be increased to about  $56\Omega$ . Alternately, bias tees combined with current setting resistors will eliminate the lowered AC load impedance. The  $50\Omega$  resistors are typically connected to ground but can be connected to the bias level needed by the succeeding stage.

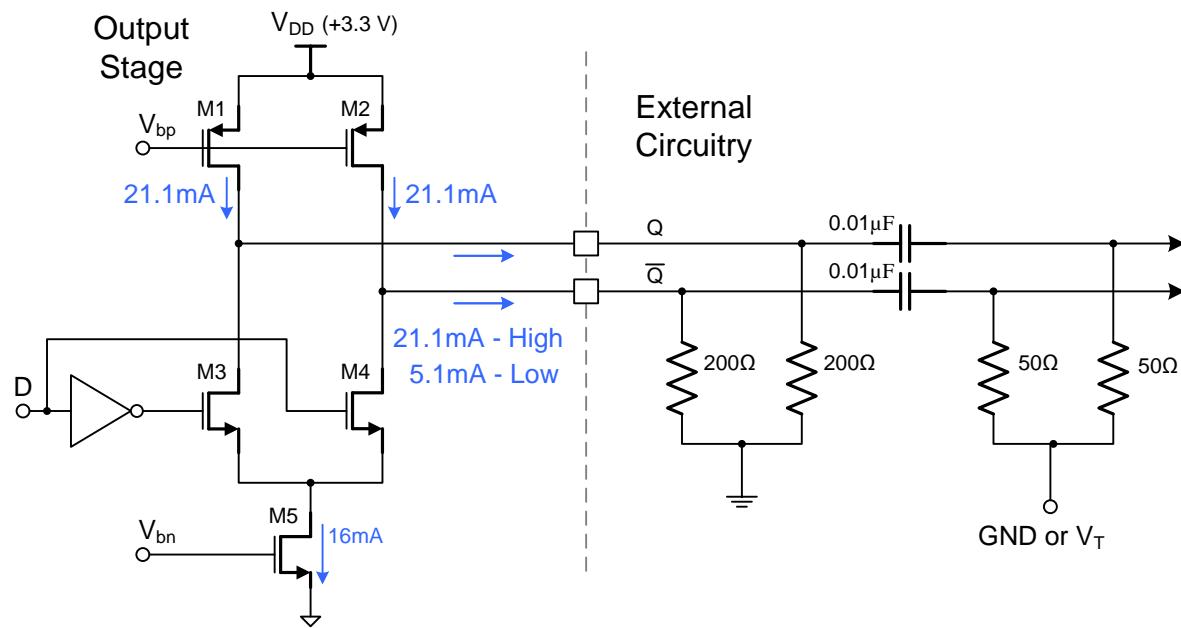

Figure 8 - AC Termination

## PERFORMANCE DATA

Table 4 - Absolute Maximum Ratings

Absolute Maximum Ratings are those values beyond which device life may be impaired.

Symbol	Characteristic	Rating	Unit
V <sub>DD</sub>	Power Supply	0 to +5.5	V
V <sub>I</sub>	Input Voltage	-0.5 to V <sub>DD</sub> + 0.5	V
T <sub>A</sub>	Operating Temperature Range	-40 to +85	°C
T <sub>STG</sub>	Storage Temperature Range	-65 to +150	°C
ESD <sub>HBM</sub>	Human Body Model	2500	V
ESD <sub>MM</sub>	Machine Model	200	V
ESD <sub>CDM</sub>	Charged Device Model	2500	V

Table 5 - DC Characteristics

DC Characteristics ( $V_{DD} = 3.0V$  to  $3.6V$  unless otherwise specified,  $T_A = -40$  to  $85^\circ C$ )

Symbol	Characteristic	Conditions		Min	Typ	Max	Unit	
$V_{OH}$	Output HIGH Voltage <sup>1</sup>	-40 C	$V_{DD} = 3.3V$	2.05		2.415	V	
		25 C		2.05		2.48		
		85 C		2.05		2.54		
$V_{OL}$	Output LOW Voltage <sup>1</sup>	-40 C	$V_{DD} = 3.3V$	1.365		1.615	V	
		25 C		1.43		1.68		
		85 C		1.49		1.74		
$I_Z$	Output Leakage Current, Tri-state <sup>2</sup>	EN=Low		-10		10	$\mu A$	
$V_{IH}$	High Level Input Voltage	EN		2			V	
$V_{IL}$	Low Level Input Voltage	EN				0.8	V	
$I_{PD}$	Pull-down Current	EN			-2.2		$\mu A$	
$R_{BIAS}$	Bias Resistor	D Input to Internal $V_{DD}/2$ Reference			10k		$\Omega$	
$I_{DD}$	Power Supply Current				22	35	mA	
$I_{DDZ}$	Power Supply Current	D Input $\leq V_{IL}$				8	mA	
	Outputs Tri-state <sup>1</sup>	EN=Low						

<sup>1</sup> Specified with outputs terminated through  $50\Omega$  resistors to  $V_{DD} - 2V$  or Thevenin equivalent.<sup>2</sup> Measured at Q /  $\bar{Q}$  pins.

Table 6 - AC Characteristics

AC Characteristics ( $V_{DD} = 3.0V$  to  $3.6V$ ,  $T_A = -40$  to  $85^\circ C$ )

AC Specifications guaranteed by design

Symbol	Characteristic	Min	Typ	Max	Unit
$t_r / t_f$	Output Rise/Fall <sup>1,2</sup> (20% - 80%)	80		250	ps
$f_{MAX}$	Maximum Input Frequency - Sine wave <sup>2</sup>			1300	MHz
$V_{INMAX}$	Maximum Recommended Input Signal			$V_{DD}$	Vpp
$V_{INMIN}$	Minimum Recommended Input Signal	0.2			Vpp
$t_{PLH}$	Propagation Delay	938		1614	ps
$t_{PHL}$	Propagation Delay	938		1614	ps
$j_{RMS}$	RMS Jitter: 12kHz - 20MHz, 155MHz Center Freq		36		fs
$n_p$	Phase Noise <sup>1,2</sup> - 1MHz offset		-165		dBc/Hz

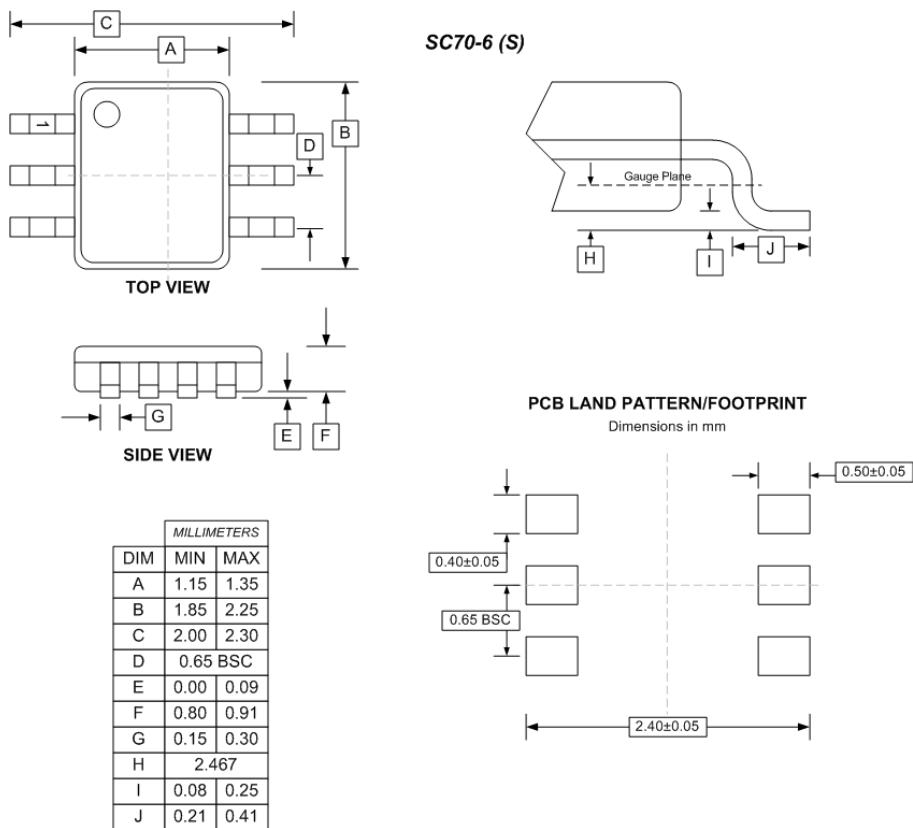

<sup>1</sup> Specified with outputs terminated through  $50\Omega$  resistors to  $V_{CC} - 2V$  or Thevenin equivalent.<sup>2</sup> 1.5 v p-p sine wave input, AC coupled to D pin.
