Description

Raytheon Electronics Semiconductor Division's Bipolar Field Programmable Read-Only Memories include both standard and power-switched versions. CS/PS inputs provide logic flexibility and ease of memory expansion decoding. SPROM power-switch circuitry is activated by the PS input.

Raytheon PROMs and SPROMs are manufactured with nichrome fuses and low power Schottky technology. The devices are shipped with all bits in the HIGH (logical ONE) state. To achieve a LOW state in a given bit location the nichrome link is fused open by passing a short, high current pulse through the link. All devices are programmed using the same programming technique.

Standard PROMs are enabled by a single active LOW CS or by both active LOW \overline{CS} and HIGH CS inputs. Powerswitched PROMs (SPROMs) are enabled by a single active LOW \overline{PS} or by both active LOW \overline{PS} and HIGH PS inputs. See the individual block diagrams for the enable scheme.

Devices may be tested using any input voltage within this input voltage range but shall be guaranteed to V_{IH}(min) and V_{IL}(max). CAUTION: To avoid test correlation problems, the test system noise (e.g., testers, handlers, etc.) should be verified to assure that V_{IH}(min) and V_{IL}(max) requirements are not violated at the device terminals.

^{2.} V_{IL} = 0.6V for Chip Select Pins on all 29600 series devices.

- 5. Dimension "B3" minimum and "L3" minimum and the appropriately derived castellation length define an unobstructed three dimensional space traversing all of the ceramic layers in which a castellation was designed. Dimensions "B3" and "L3" maximum define the maximum width and depth of the castellation at any point on its surface. Measurement of these dimensions may be made prior to solder dripping.
- Chip carriers shall be constructed of a minimum of two ceramic layers
- Symbol "N" is the maximum number of terminals. Symbol "ND" and "NE" are the number of terminals along the sides of Length "D" and "E" respectively.

- Index area: a notch or a pin one identification mark shall be located adjacent to pin one. The manufacturer's identification shall not be used as pin one identification mark.
- 2. The minimum limit for dimension "b2" may be .023 (.58mm) for leads number 1, 12, 13 and 24 only.
- Dimension "Q" shall be measured from the seating plane to the base plane.
- 4. This dimension allows for off-center lid, meniscus and glass overrun.
- The basic pin spacing is .100 (2.54mm) between centerlines. Each pin centerline shall be located within ±.010 (.25mm) of its exact longitudinal position relative to pins 1 and 24.
- 6. Applies to all four corners (leads number 1, 12, 13, and 24).
- "eA" shall be measured at the center of the lead bends or at the centerline of the leads when "α" is 90°.
- 8. All leads Increase maximum limit by .003 (.08mm) measured at the center of the flat, when lead finish applied.
- 9. Twenty-two spaces.
