8-bit Microcontroller with a Built-in LCD driver

GENERAL DESCRIPTION

This LSI is a high performance CMOS 8-bit microcontroller equipped with an 8-bit CPU nX-U8/100 and integrated with peripheral functions such as the UART, RC oscillation type A/D converter, and LCD driver. The CPU nX-U8/100 is capable of efficient instruction execution in 1-instruction 1-clock mode by 3-stage pipe line architecture parallel processing. Additionally, it adopts the low-/high-speed dual clock system, standby mode, and process that prohibits leak current at high temperatures, and is most suitable for battery-driven applications. MTP version (ML610Q471/ML610Q472/ML610Q473) can rewrite programs on-board, which can contribute to reduction in product development TAT. The flash memory incorporated into this MTP version implements the mask ROM-equivalent low-voltage operation (1.25V or higher) and low-power consumption (typically 5 μ A at low-speed operation), enabling volume production by the MTP version. For industrial use, ML610471P/ML610472P/ML610473P/ML610Q471P/ML610Q472P/ML610Q473P with the extended operating ambient temperature ranging from -40°C to 85°C are available.

*1: Kfx is the ratio of the oscillation frequency by the sensor resistor to the oscillation frequency by the reference resistor on the same conditions.

$$Kfx = \frac{f_{oscx}(\text{RT1-CS1 oscillation})}{f_{oscx}(\text{RS1-CS1 oscillation})}, \quad (x = 1, 2, 3)$$

*1: Input logic circuit to determine the specified measuring conditions.

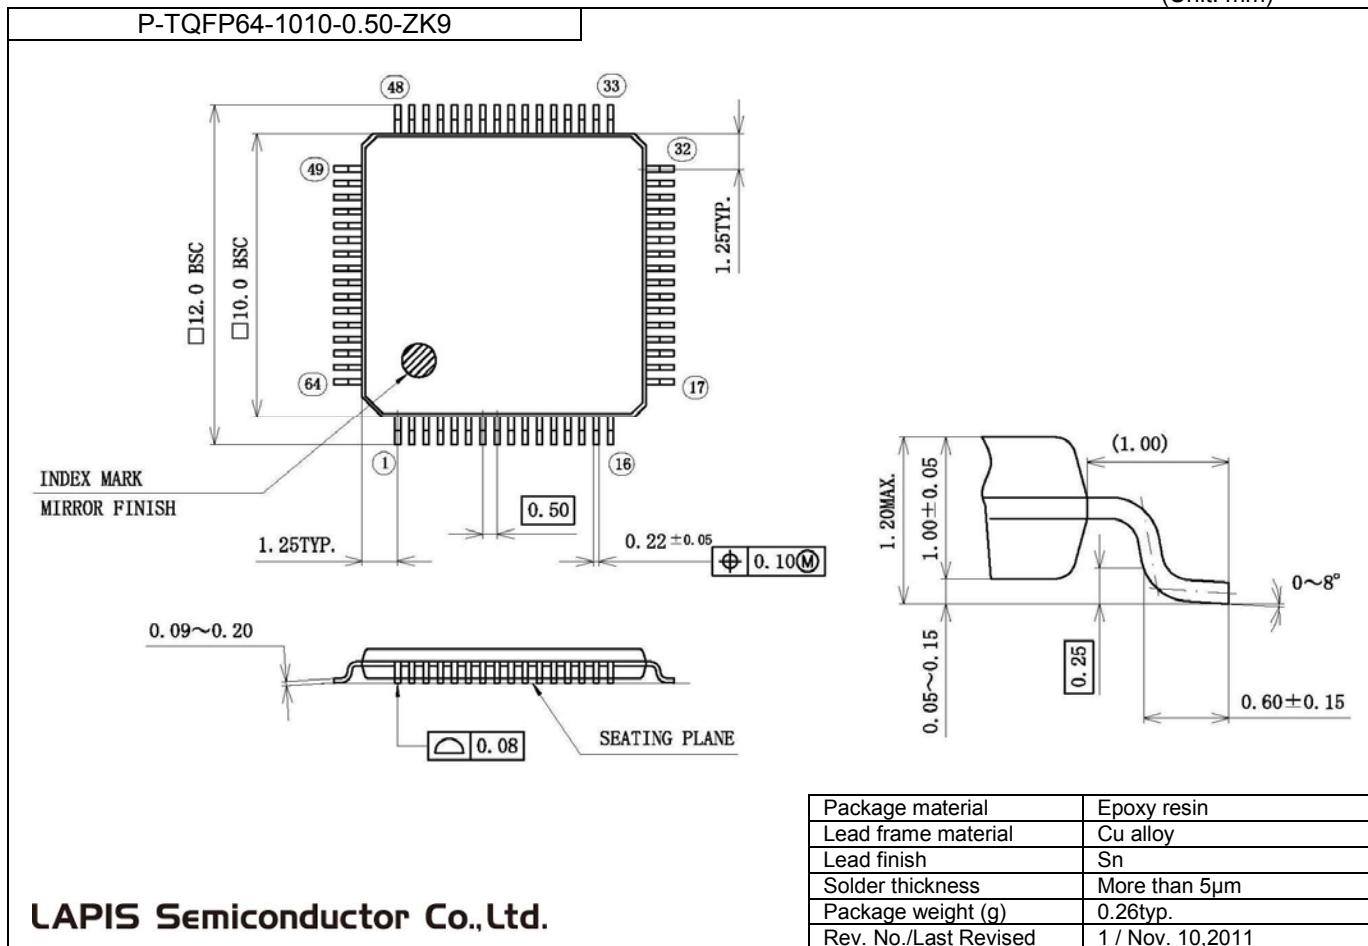

Note:

- Please have the shortest layout for the common node (wiring patterns which are connected to the external capacitors, resistors and IN1 pin), including CVR1. Especially, do not have long wiring between IN1 and RS1. The coupling capacitance on the wires may occur incorrect A/D conversion. Also, please do not have signals which may be a source of noise around the node.
- When RT1 (Thermistor and etc.) requires long wiring due to the restricted placement, please have V_{SS}(GND) trace next to the signal.
- Please make wiring to components (capacitor, resistor, and so on) necessary for objective measurement. Wiring to reserved components may affect to the A/D conversion operation by noise the components itself may have.

PACKAGE DIMENSIONS

64pin TQFP Package

(Unit: mm)

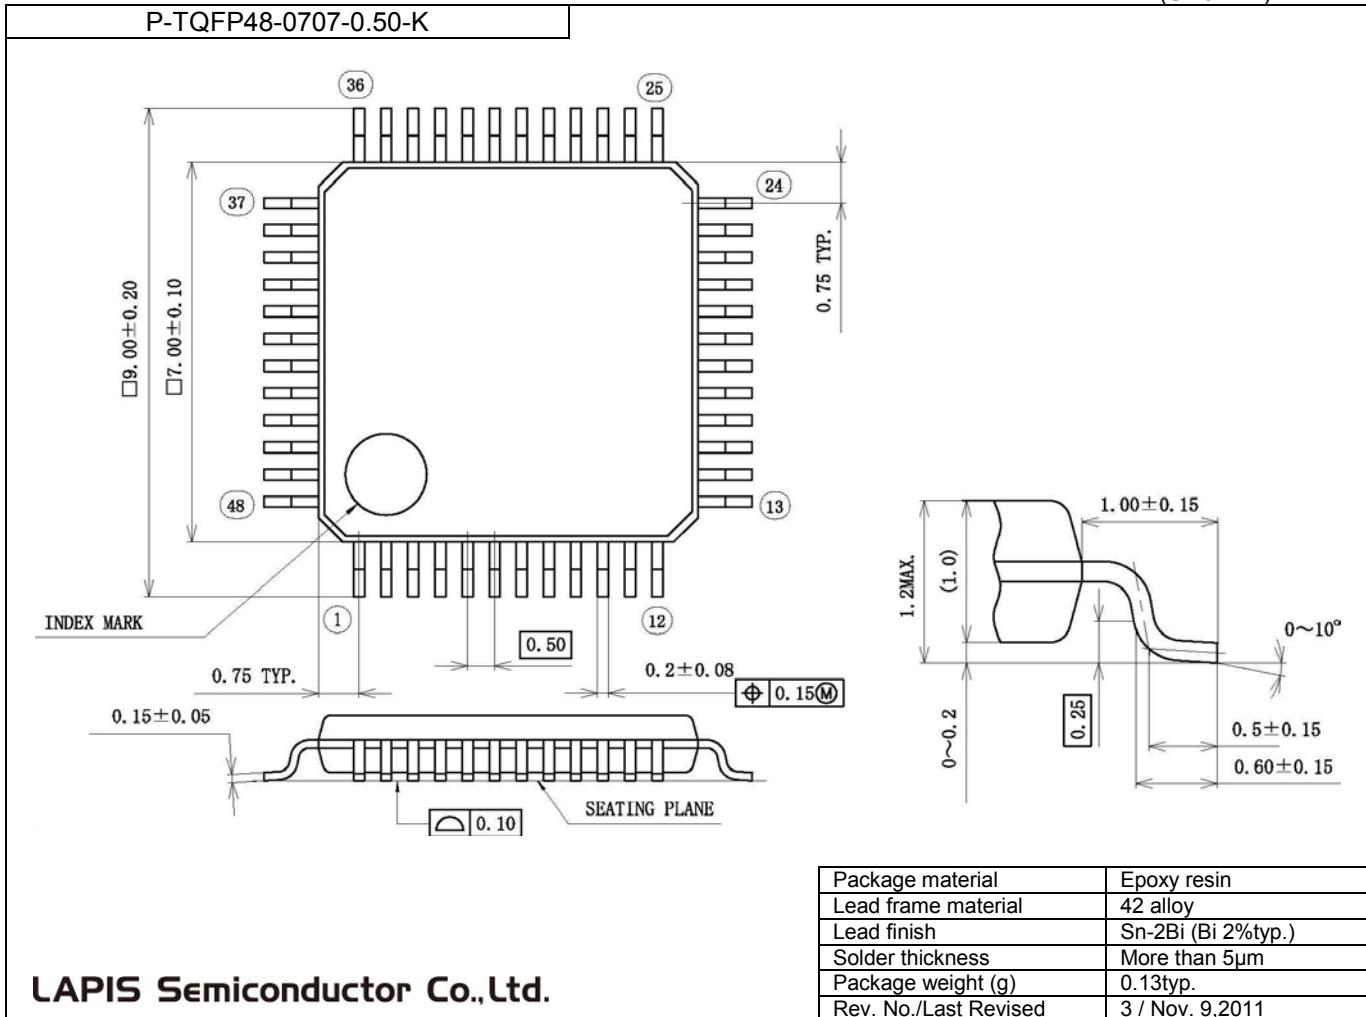

Notes for Mounting the Surface Mount Type Package

The surface mount type packages are very susceptible to heat in reflow mounting and humidity absorbed in storage. Therefore, before you perform reflow mounting, contact ROHM's responsible sales person for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).

48 pin TQFP Package
