

300mA Synchronous Step-Down switching regulator IC

■GENERAL DESCRIPTION

The **NJU7691** is a synchronous rectification type switching regulator IC with a power MOSFET (300mA output).

It has an over current detection and an overheat protection circuit. Therefore, the circuit can be configured with few external parts.

The output voltage can be set from 0.8V. It is suitable for supplying power to a digital chip and a logic IC with low voltage.
