

SGM8951/2

110kHz, Rail-to-Rail Input and Output Operational Amplifiers

PRODUCT DESCRIPTION

The SGM8951 (single) and SGM8952 (dual) are high-performance CMOS operational amplifiers optimized for low supply operation. These amplifiers are designed to operate on single supplies from 1.8V to 5.5V. Applications include sensor amplification and signal conditioning in battery-powered systems.

The SGM8951/2 offer excellent CMRR without the crossover distortion associated with traditional complimentary input stages. This results in excellent linearity performance. The input common mode range includes both the negative and positive supplies.

The SGM8951/2 provide excellent overall performance. They exhibit low offset, making these devices an excellent choice for high quality, low voltage or battery powered systems.

SGM8951 single is available in Green SOT-23-5 and SOIC-8 packages. The SGM8952 dual is available in Green SOIC-8 and MSOP-8 packages. The SGM8951/2 are specified over the extended -40 °C to +85 °C temperature range.

FEATURES

- Rail-to-Rail Input and Output
- Supply Voltage Range: 1.8V to 5.5V
- Low Input Offset Voltage: 0.2mV (TYP)
- Gain-Bandwidth Product: 110kHz
- Low Supply Current:
 - SGM8951 26 μ A (TYP)
 - SGM8952 34 μ A (TYP)
- Small Packaging:
 - SGM8951 Available in SOT-23-5 and SOIC-8 Packages
 - SGM8952 Available in MSOP-8 and SOIC-8 Packages

APPLICATIONS

Data Acquisition
Process Control
Active Filters
Test Equipment
Mobile Phone
Audio Processing
Video Processing
Headphone Amplifier
Portable Equipment
Broadband Communications

NOTE

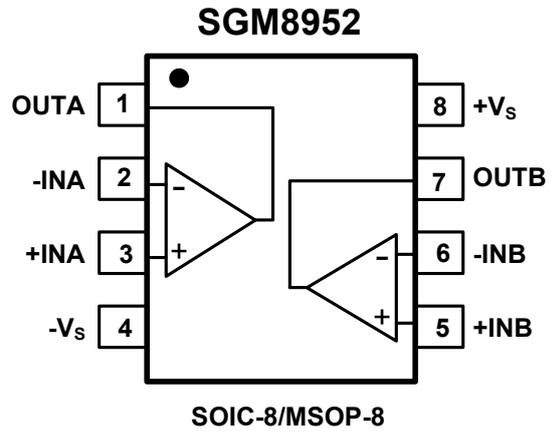

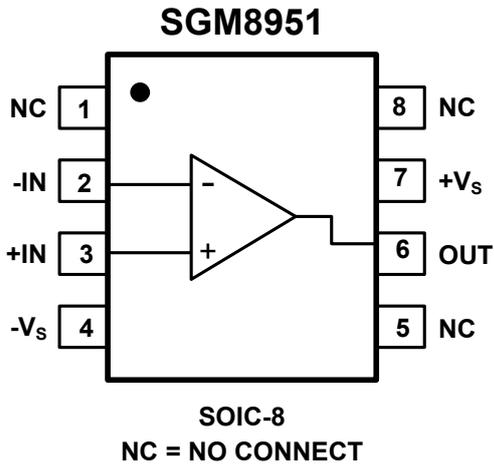

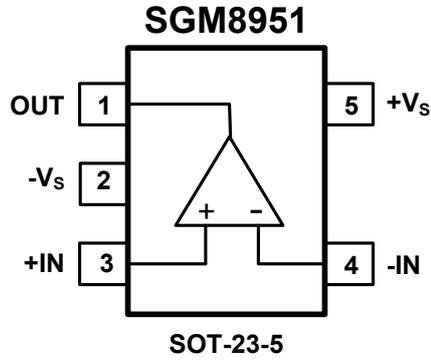

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

CAUTION

This integrated circuit can be damaged by ESD if you don't pay attention to ESD protection. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

SGMICRO reserves the right to make any change in circuit design, specification or other related things if necessary without notice at any time. Please contact SGMICRO sales office to get the latest datasheet.

NOTE 1: Correct power supply bypassing is very important for optimizing SGM8951/2 performance. A $0.1\mu F$ and a $10\mu F$ capacitors are always used to bypass V_S pin of SGM8951/2. Please place these two capacitors as close to the SGM8951/2 V_S pin as possible. A large ground plane is also needed to ensure optimum performance.
