

RFMD  
RF6505BLE202  
KLWD

Package Style: QFN, 20-Pin, 3.5mmx3.5mmx0.55mm

Functional Block Diagram

## Features

- TX P1dB: 27 dBm
- Integrated RF Front End Module, Balun, PA, Filter, Ant Switch, LNA with Bypass, TX/RX Switch
- Single Differential Bidirectional TX/RX Port.
- Compatible with most transceivers

## Applications

- ZigBee® 802.15.4 Based Systems for Remote Monitoring and Control
- WiFi 802.11 b/g
- 2.4GHz ISM band applications
- Smart Meters for Energy Management

## Product Description

The RF6505 integrates a complete solution in a single Front End Module (FEM) for WiFi and ZigBee applications in the 2.4GHz to 2.5GHz band. This FEM integrates a balun, TX/RX switch, power amplifier, harmonic filter, DP2T switch, and low noise amplifier with bypass mode. It provides a single balanced TDD access for Rx and Tx paths along with two ports on the output for connecting a diversity solution or a test port. The device is provided in a 3.5mm x 3.5mm x 0.5mm, 20-pin QFN package.

## Ordering Information

|               |   |
|---------------|---|
| RF6505        | Standard 25 piece bag                               |
| RF6505SR      | Standard 100 piece reel                             |
| RF6505TR7     | Standard 750 piece reel                             |
| RF6505TR13    | Standard 2500 piece reel                            |
| RF6505PCK-410 | Fully assembled evaluation board and 5 loose pieces |

**Absolute Maximum Ratings**

| Parameter                                     | Rating      | Unit |
|---|-------------|------|
| DC Supply Voltage                             | 5           | V    |
| Operating Case Temperature                    | -40 to +85  | °C   |
| Storage Temperature                           | -40 to +150 | °C   |
| ESD Human Body Model RF Pins                  | 500         | V    |
| ESD Human Body Model All Other Pins           | 500         | V    |
| ESD Charge Device Model All Pins              | 500         | V    |
| Moisture Sensitivity Level                    | MSL 2       |      |
| Maximum Input Power to PA and LNA (no damage) | +5          | dBm  |

**Caution!** ESD sensitive device.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

RoHS status based on EU Directive 2002/95/EC (at time of this document revision).

| Antenna Select Switch Speed        |               |      | 1    | µS   | ANT1 or ANT2 path, TX or RX mode                                  |

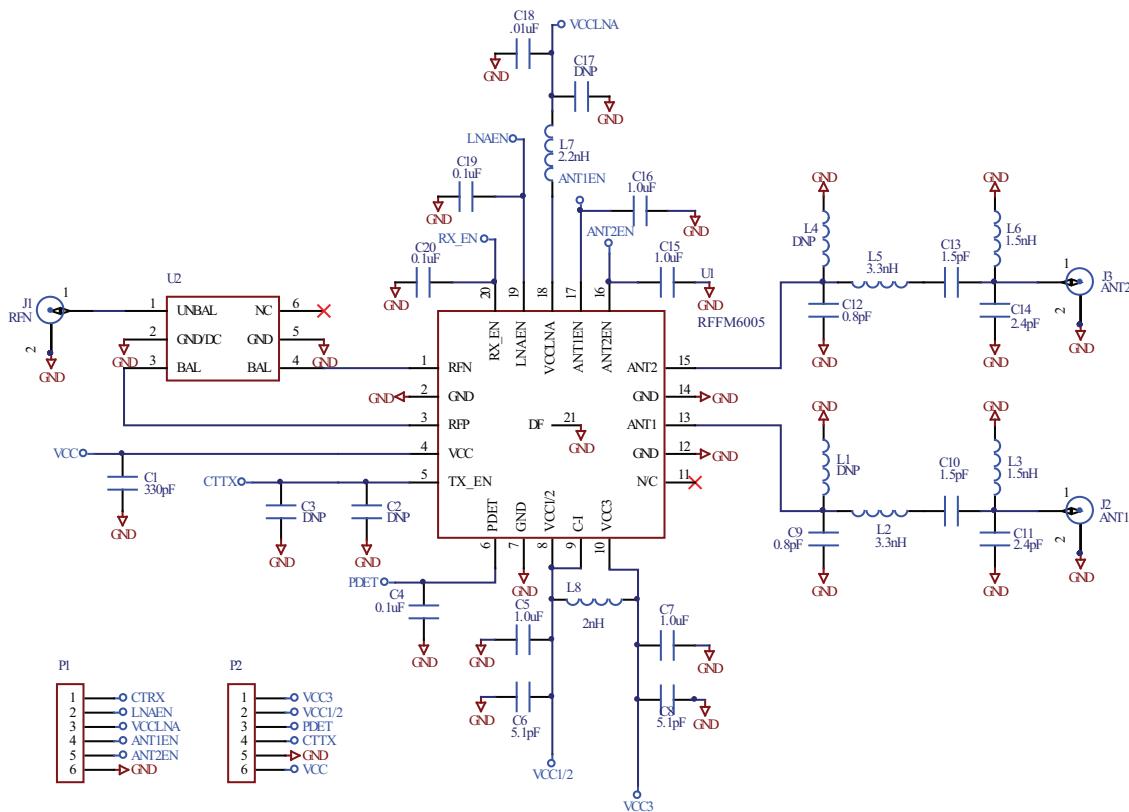

| Pin       | Function       | Description  |
|-----------|----------------|--|
| <b>1</b>  | <b>RFN</b>     | Differential RF input for PA (TX_Mode) and output for LNA (RX_Mode) internally matched to $100\Omega$ .                                |
| <b>2</b>  | <b>GND</b>     | Ground.  |
| <b>3</b>  | <b>RFP</b>     | Differential RF input for PA (TX_Mode) and output for LNA (RX_Mode) internally matched to $100\Omega$ .                                |
| <b>4</b>  | <b>VCC</b>     | Voltage supply for VCC Bias. An external $0.1\mu F$ capacitor might be needed for low frequency decoupling.                            |
| <b>5</b>  | <b>TX_EN</b>   | Enable voltage pin for the PA and switch. See logic table for operation.   |
| <b>6</b>  | <b>PDET</b>    | Provides and output voltage proportional to the output RF level.   |
| <b>7</b>  | <b>GND</b>     | Ground.  |
| <b>8</b>  | <b>VCC1/2</b>  | Voltage supply for the first and second stages of the PA. An external $1\mu F$ capacitor might be needed for low frequency decoupling. |
| <b>9</b>  | <b>C/I</b>     | This pin is connected internally (C/I) to Pin 8 therefore this pin should not be grounded. This pin should be left open.               |
| <b>10</b> | <b>VCC3</b>    | Voltage supply for the third stage of the PA. An external $1\mu F$ capacitor might be needed for low frequency decoupling.             |
| <b>11</b> | <b>NC</b>      | No connect.  |
| <b>12</b> | <b>GND</b>     | Ground.  |
| <b>13</b> | <b>ANT1</b>    | This is a common port (antenna). It is matched to $50\Omega$ and DC block is provided internally.                                      |
| <b>14</b> | <b>GND</b>     | Ground.  |
| <b>15</b> | <b>ANT2</b>    | This is a common port (antenna). It is matched to $50\Omega$ and DC block is provided internally.                                      |
| <b>16</b> | <b>ANT2_EN</b> | Control pin for antenna select. See logic table for operation.   |
| <b>17</b> | <b>ANT1_EN</b> | Control pin for antenna select. See logic table for operation.   |
| <b>18</b> | <b>VCCLNA</b>  | Voltage supply. An external $1\mu F$ capacitor might be needed for low frequency decoupling.   |
| <b>19</b> | <b>LNA_EN</b>  | LNA enable pin for selecting between High gain mode and Bypass mode.   |
| <b>20</b> | <b>RX_EN</b>   | Enable voltage pin for the Receive mode and switch. See logic table for operation.   |

## Package Drawing

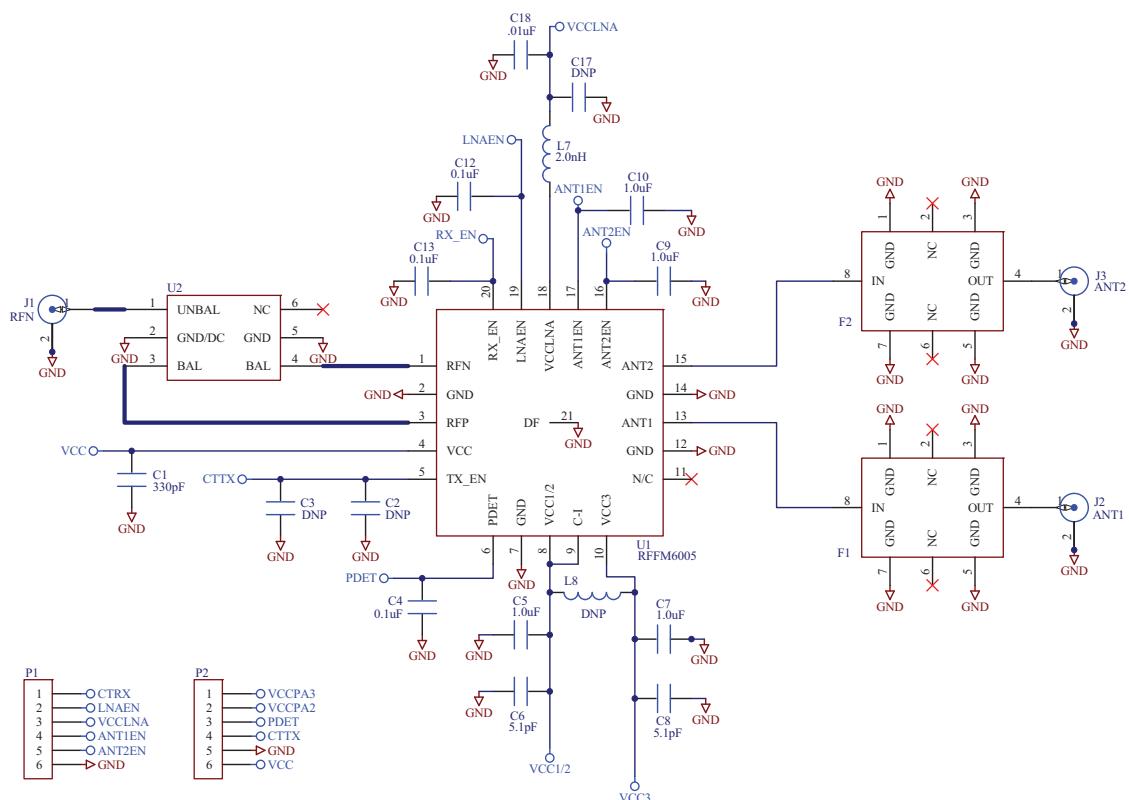

| Mode                      | TX_EN | RX_EN | LNA_EN | ANT1_EN | ANT2_EN |
|---------------------------|-------|-------|--------|---------|---------|
| Tx, Antenna 1             | High  | Low   | Low    | High    | Low     |
| Tx, Antenna 2             | High  | Low   | Low    | Low     | High    |
| Rx, Antenna 1             | Low   | High  | High   | High    | Low     |
| Rx, Antenna 2             | Low   | High  | High   | Low     | High    |
| Rx, Antenna 1, LNA Bypass | Low   | High  | Low    | High    | Low     |
| Rx, Antenna 2, LNA Bypass | Low   | High  | Low    | Low     | High    |

## Evaluation Board Schematic

\*Note: Pin 9 is connected internally (C/I) to Pin 8 therefore this pin should not be grounded. This pin should be left open.
