NOTICE

This publication is the proprietary of SHARP and is copyrighted, with all rights reserved. Under the copyright laws, no part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical for any purpose, in whole or in part, without the express written permission of SHARP. Express written permission is also required before any use of this publication may be made by a third party.

The application circuit examples in this publication are provided to explain the representative applications of SHARP's devices and are not intended to guarantee any circuit design or permit any industrial property right or other rights to be executed. SHARP takes no responsibility for any problems related to any industrial property right or a third party resulting from the use of SHARP's devices, except for those resulting directly from device manufacturing processes.

In the absence of confirmation by device specification sheets, SHARP takes no responsibility for any defects that occur in equipment using any of SHARP's devices, shown in catalogs, data books, etc. Contact SHARP in order to obtain the latest device specification sheets before using any SHARP's device.

SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structures and other contents described herein at any time without notice in order to improve design or reliability. Contact SHARP in order to obtain the latest specification sheets before using any SHARP's device. Manufacturing locations are also subject to change without notice.

Observe the following points when using any device in this publication. SHARP takes no responsibility for damage caused by improper use of the devices.

The devices in this publication are designed for use in general electronic equipment designs, such as:

- •Personal computers •Office auto
 - Office automation
- •Telecommunication equipment

•PDA

- •Test and measurement equipment
- •Industrial control
- •Audio visual and multimedia equipment
- •Consumer electronics

The appropriate design measures should be taken to ensure reliability and safety when SHARP's devices are used for equipment such as:

- •Transportation control and safety equipment (i.e., aircraft, trains, automobiles, etc.)
- •Traffic signals
- •Gas leakage sensor breakers
- •Alarm equipment •Various safety devices etc.

SHARP's devices shall not be used for equipment that requires extremely high level of reliability, such as:

- •Military and space applications
- •Nuclear power control equipment
- •Medical equipment for life support

Contact a SHARP representative, in advance, when intending to use SHARP's devices for any "specific" applications other than those recommended by SHARP.

Contact and consult with a SHARP representative if there are any questions about the contents of this publication.

(1) Application

This specification applies to LQ035Q7DH07

(2) Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor), named AD-TFT (Advanced TFT). It is practicable in both transmissive-type and reflection-type modes. It is composed of a color TFT-LCD panel, driver ICs, an FPC, a back light, and a back sealed casing. It isn't composed control circuit. Graphics and texts can be displayed on a 240×3×320 dots panel with 262,144 colors by supplying.

Optimum view angle is 6 o'clock. An inverted display mode is selective in the vertical or the horizontal direction.

(3) Mechanical specifications

Table 1

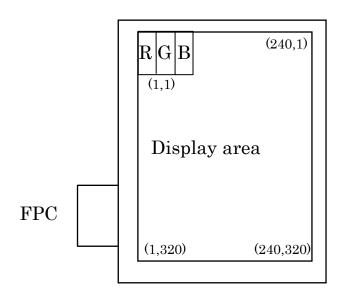

Parameter	Specifications	Units	Remarks
Screen size (Diagonal)	8.9 [3.52"] Diagonal	cm	
Display active area	53.64(H)×71.52(V)	mm	
Pixel format	240(H)×320(V)	pixels	
	(1 pixel = R+G+B dots)		
Pixel pitch	0.2235(H)×0.2235(V)	mm	
Pixel configuration	R,G,B vertical stripe		
Unit outline dimension	65.0(W)×86.2(H)×3.2(D)	mm	[Note3-1]
Mass	34	g	Тур.
Surface hardness	3H		

[Note 3-1]

Excluding protrusion, including FPC cover portion

For detailed measurements and tolerances, please refer to Fig. 1.

- *Cautions when you turn on or off the power supply
 - ① Turn on or off the power supply with simultaneously or the following sequence.
 - ② The input signal of "MOD" Terminals (Pin No.11) must be low voltage when turning on the power supply, and it is held until more than double vertical periods after DATA are turned on completely. After then, it must be held high voltage until turning off the power supply. (Connect Pin No.11 terminals to the same signal.)

- [Note 7-1] DCLK,SPL,SPR,LBR,LP,PS,REV,R0 to R5,G0 to G5 and B0 to B5 terminals are applied.
- [Note 7-2] DCLK,SPL,SPR,LBR,LP,REV,R0 to R5,G0 to G5 and B0 to B5 terminals are applied.
- [Note 7-3] PS terminal is applied.
- [Note 7-4] MOD, CLS, SPS and U/L terminals are applied.
- [Note 7-5] VCOMAC should be alternated on VCOMDC every 1 horizontal period and 1 vertical period. VCOMDC bias is adjusted so as to minimize flicker or maximum contrast every each module.

^{*} The measuring method of the optical characteristics is shown by the following figure.

^{*} A measurement device is TOPCON luminance meter BM-5(A) (Viewing cone 1) or SR-3.

Measuring method (c) for optical characteristics

[Note 9-1] Viewing angle range is defined as follows.

6 o'clock direction

Definition for viewing angle

[Note 9-2] Definition of contrast ratio:

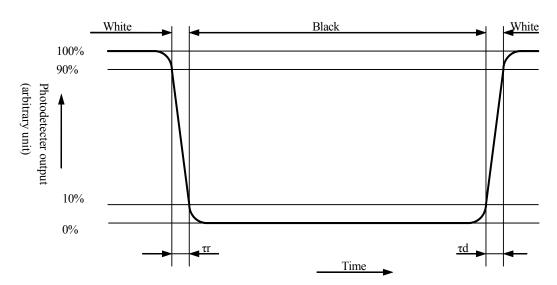

The contrast ratio is defined as follows:

Contrast ratio (CR) = $\frac{\text{Photodetecter output with all pixels white(GS63)}}{\text{Photodetecter output with all pixels black(GS0)}}$

VCOMAC=5.0VP-P

[Note 9-3] Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

[Note 9-4] A measurement device is Minolta CM-2002.

[Note 9-5] Definition of reflection ratio:

 $Reflection ratio = \frac{Light detected level of the reflection by the LCD module}{Light detected level of the reflection by the standard white board}$

[Note 9-6] A measurement device is ELDIM EZContrast

[Note 9-7] This is the reference value. The White-LED life time is defined as a time when brightness not to become under 50% of the original value. (at Ta=25°C)

(10) Display quality

The display quality of the color TFT-LCD module shall be in compliance with the Incoming Inspection Standards for TFT-LCD.

(11) Mechanical characteristics

11-1) External appearance

See Fig. 1

11-2) FPC (for LCD panel) characteristics

(1)Specific connector

FH12A-50S-0.5SH(55) or FH12-50S-0.5SH(55) (HIROSE)

(2) Bending endurance of the bending slits portion

No line of the FPC is broken for the bending test (Bending radius=0.6mm and angle=90°) in 30 cycles.

(12) Handling Precautions

12-1) Insertion and taking out of FPCs

- (1) Be sure to turn off the power supply when inserting or disconnecting the FPC.
- (2) Please insert FPC in the connector carefully so that the tension should not hang.

12-2) Handling of FPCs

The FPC for LCD panel shall be bent only slit portion. The bending slit shall be bent uniformly on the whole slit portion with bending radius larger than 0.6mm, and only inner side (back side of the module). Don't bend it outer side (display surface side).

Don't give the FPCs too large force, for example, hanging the module with holding FPC.

12-3) Installation of the module

On mounting the module, be sure to fix the module on the same plane. Taking care not to warp or twist the module.

12-4) Precautions when mounting

- (3) If water droplets and oil attaches to it for a long time, discoloration and staining occurs. Wipe them off immediately.
- (4) Glass is used for the TFT-LCD panel. If it is dropped or bumped against a hard object, it may be broken. Handle it with sufficient care.
- (5) Since CMOS LSI is used in this module, take care of static electricity and injure the human earth when handling. Observe all other precautionary requirements in handling components.

12-5) Others

- (1) Do not expose the LCD panel to direct sunlight. Lightproof shade etc. should be attached when LCD panel is used under such environment. The panel characteristic might be deteriorated and the display fineness decrease when strong light is irradiated to the liquid crystal panel.
- (2) If it is kept at a temperature below the rated storage temperature, it becomes coagulated and the panel may be broken. Also, if it is kept at a temperature above the rated storage temperature, it becomes isotropic liquid and does not return to its original state. Therefore, it is desirable to keep it at room temperature as much as possible.
- (3) If the LCD breaks, don't put internal liquid crystal into the mouth. Rinse it as soon as possible if it gets inside your eye or mouth by mistake. When the liquid crystal sticks to the hands, feet and clothes, wash it out immediately.
- (4) Wipe off water drop or finger grease immediately. Long contact with water may cause discoloration or spots.
- (5) Observe general precautions for all electronic components.
- (6) VCOM must be adjusted on condition of your final product. No adjustment causes the deterioration for display quality.
- (7) Static image should not be displayed more than 5 minutes in order to prevent from occurrence of afterimage.
- (8) Since the front polarizer is easily damaged, pay attention not to scratch it. Blow away dust on the polarizer with antistatic N2 blow. It is undesirable to wipe off because a polarizer is sensitive. It is recommended to peel off softly using the adhesive tape when soil or finger oil is stuck to the polarizer. When unavoidable, wipe off carefully with a cloth for wiping lenses.
- (9) In case of attaching protective board over the LCD, be careful about the optical interface fringe etc. which degrades

display quality.

- (10) When handling LCD modules and assembling them into cabinets, that long-terms storage in the environment of oxidization or deoxidization gas and the use of such materials as reagent, solvent, adhesive, resin, etc. which generate these gasses, causes corrosion and discoloration of the modules. Therefore, please avoid these uses. Epoxy resin (amine series curing agent), silicone adhesive material (dealcoholization series and oxime series), tray forming agent (azo compound) etc, in the cabinet or the packing materials may induce abnormal display with polarizer film deterioration regardless of contact or no contact to polarizer film. Be sure to confirm the component of them.
- (11) The LED used for this product is very sensitive to the temperature. Luminance decreases rapidly when it issued for a long time under the environment of the high temperature. Please consult our company when it is used under the environment like the above mentioned.
- (12) Notice: Never dismantle the module, because it will cause failure. Moreover, please do not peel off the tapes other than the creped paper tape (yellow tape) of a protection film pasted to the product.
- (13) If a minute particle enters in the module and adheres to an optical material, it may cause display non-uniformity issue, etc. Therefore, fine-pitch filters have to be installed to cooling and inhalation hole if you intend to install a fan.

(13) Reliability Test Conditions for TFT-LCD Module

Table 11

No.	Test items	Test conditions				
1	High temperature storage test	Ta=+70°C	240h			
2	Low temperature storage test	Ta=-25°C	240h			
3	High temperature and high humidity operating test	Tp=+40°C, 95%RH (But no condensation of dew)	240h			
4	High temperature operating test	Tp=+70°C	240h			
5	Low temperature operating test	Tp=-10°C	240h			
6	Electro static discharge test	$\pm 200\text{V}/200\text{pF}(0\Omega)$ to Terminals (1 time f $\pm 8\text{kV}/150\text{pF}(330\Omega)$ to Housing $\pm 15\text{kV}/150\text{pF}(330\Omega)$ to Housin	For each terminals) g bezel (Contact)			
7	Shock tset	980 m/s ² , 6 ms $\pm X$, $\pm Y$, $\pm Z$ 3 times for each α (JIS C0041, A-7 C				
8	Vibration test	Frequency range: 10Hz to 55Hz Stroke: 1.5 mm Sweep: 10Hz to 55Hz X,Y,Z 2 hours for each direction (total 6 hours) (JIS C0040,A-10 Condition A)				
9	Heat shock test	Ta=-25 to +70°C / 5 cycles (1h) (1h)				
10	FPC Bending Test Bending 30 times by bending radius R0.6mm and angle=90° (LCD FPC)					

[Note] Ta = Ambient temperature, Tp = Panel temperature

[Check items]

Test No.1 to 9:

In the standard condition, there shall be no practical problems that may affect the display function.

(14) Others

14-1) Indication of lot number

The lot number is shown on a label. Attached location is shown in Fig.1 (Outline Dimensions).

14-2) Used Regulation of Chemical Substances Breaking Ozone Stratum

Substances with the object of regulating: CFCS, Carbon tetrachloride, Halon 1,1,1-Trichloro ethane (Methyl chloroform)

- (a) This LCD module, Constructed part and Parts don't contain the above substances.
- (b) This LCD module, Constructed part and Parts don't contain the above substances in processes of manufacture.
- 14-3) If some problems arise about mentioned items in this document and other items, the user of the TFT-LCD module and SHARP will cooperate and make efforts to solve the problems with mutual respect and good will.

(15) Forwarding form (See Fig.2 Package Form)

a) Piling number of cartons: Max 8

b) Package quality in one cartons: 100pcs

c) Carton size : $575mm \times 332mm \times 209mm$

d) Total mass of 1 carton filled with full modules: 7450g

Conditions for storage

Environment

(1)Temperature: 0 to 40°C

(2)Humidity: 60%RH or less (at 40°C)

No dew condensation at low temperature and high humidity.

(3)Atmosphere: Harmful gas, such as acid or alkali which bites electronic components and/or wires, must

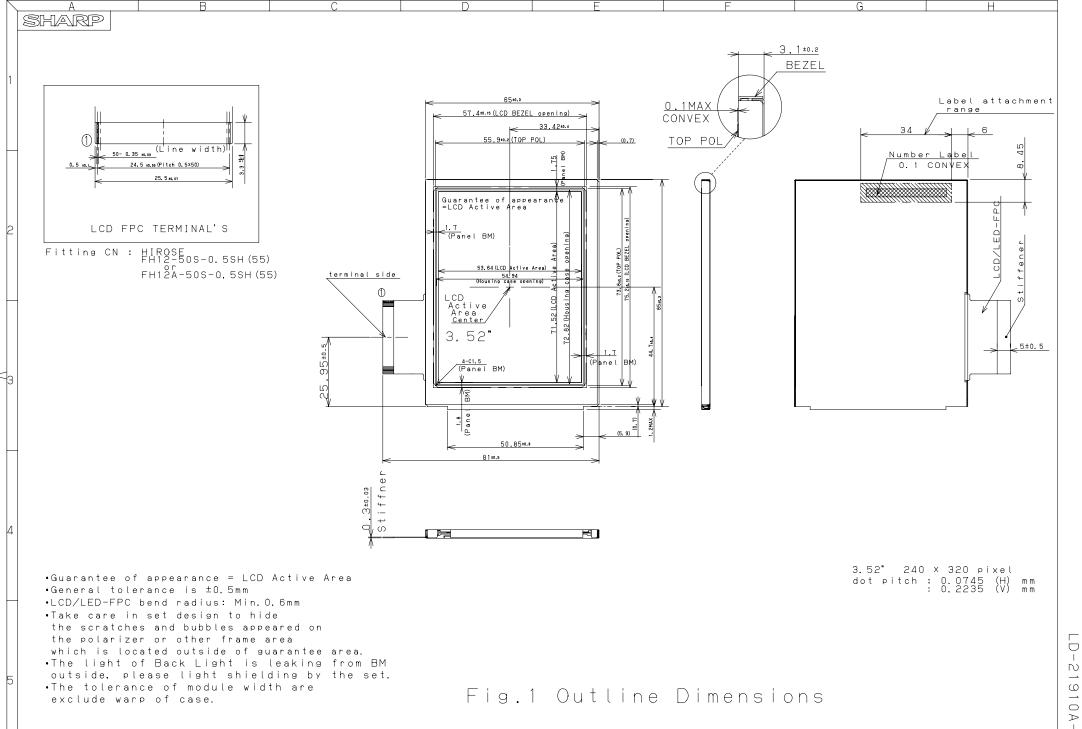

not be detected.

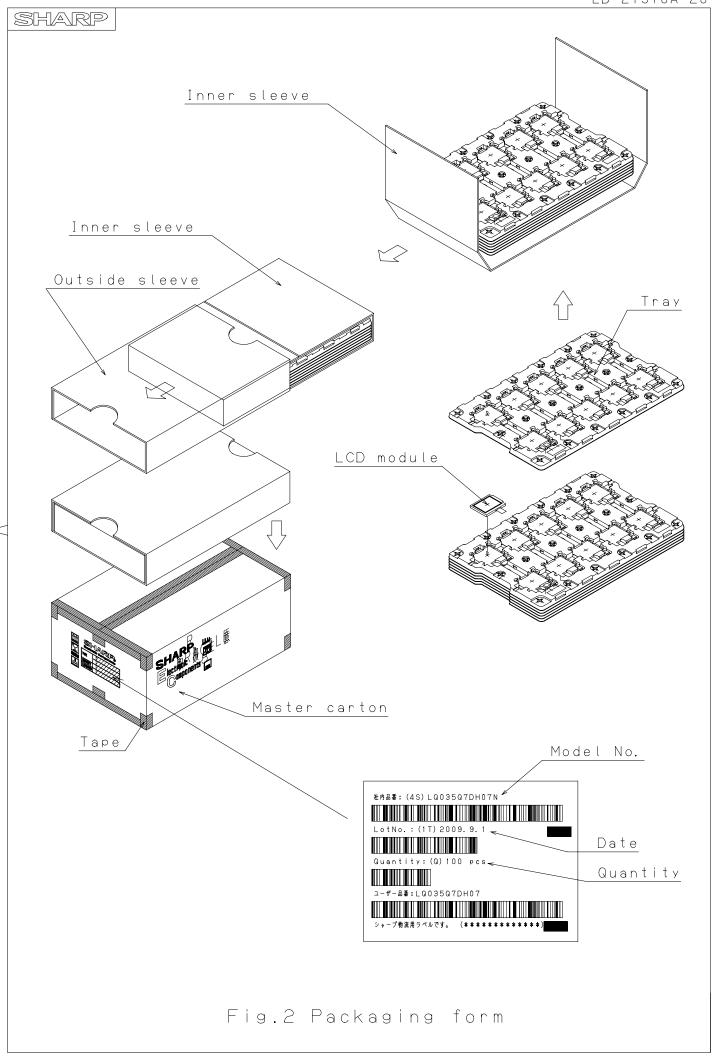

(4)Period: about 3 months

(5)Opening of the package: In order to prevent the LCD module from breakdown by electrostatic charges, please

control the room humidity over 50%RH and open the package taking sufficient

countermeasures against electrostatic charges, such as earth, etc
