

The LM79L00 Series negative voltage regulators are inexpensive, easy-to-use devices suitable for numerous applications requiring up to 100mA. Like the higher powered LM7900 Series negative regulators, this series features thermal shutdown and current limiting, making them remarkably rugged. In most applications, no external components are required for operation.

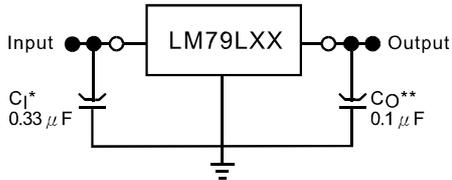

The LM7900 devices are useful for on-card regulation or any other application where a regulated negative voltage at a modest current level is needed. These regulators offer substantial advantage over the common resistor/zenor diode approach.

FEATURES

- No External Components Required.
- Internal Short-Circuit Current Limiting.
- Internal Thermal Overload Protection.
- Low Cost.
- Complementary Positive Regulators Offered. (LM78L00 Series)

Standard Application

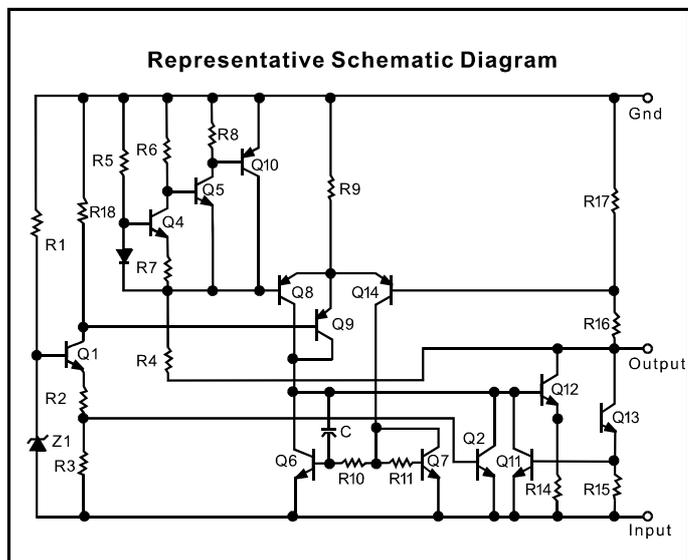

C_1^*
 $0.33 \mu F$

C_0^{**}
 $0.1 \mu F$

A common ground is required between the input and the output voltages. The input voltage must remain typically 2.0V above the output voltage even during the low point on the ripple voltage.

* C_1 is required if regulator is located an appreciable distance from the power supply filter.

** C_0 improves stability and transient response.

ORDERING INFORMATION

Device	Operating Temperature Range	Package
LM79LxxLP	$0^\circ \sim +125^\circ C$	TO-92
LM79LxxD	$0^\circ \sim +125^\circ C$	SOP-8
LM79LxxH	$0^\circ \sim +125^\circ C$	SOT-89

LM79L05 ELECTRICAL CHARACTERISTICS AT SPECIFIED VIRTUAL JUNCTION TEMPERATURE, $V_I = -10V, I_O = 40mA$ (unless otherwise noted)

* Pulse testing techniques are used to maintain the junction temperature as close to the ambient temperature as possible. Thermal effects must be taken into account separately. All characteristics are measured with a $0.33 \mu\text{F}$ capacitor across the input and a $0.1 \mu\text{F}$ capacitor across the output.

** This specification applies only for dc power dissipation permitted by absolute maximum ratings.
