

## X Band Driver Amplifier

### GaAs Monolithic Microwave IC

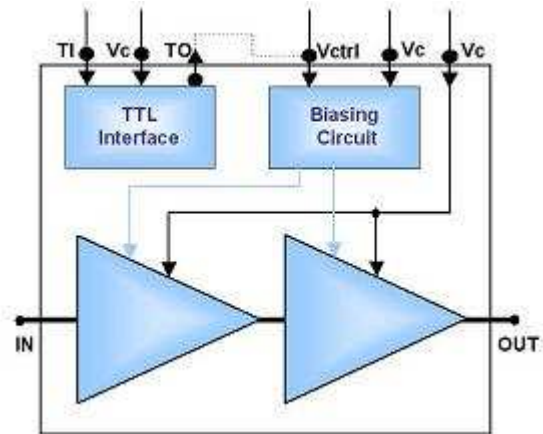

#### Description

The CHA5012 chip is a monolithic two-stage medium power amplifier designed for X band applications.

This device is manufactured using a GaInP HBT process, including via holes through the substrate and air bridges. A nitride layer protects the transistors and the passive components. Special heat removal techniques are implemented to guarantee high reliability.

To simplify the assembly process:

- the backside of the chip is both RF and DC grounded
- bond pads and back side are gold plated for compatibility with eutectic die attach method and thermosonic or thermocompression bonding process.

*Pout & PAE @ 3dB gain compression and Linear Gain (Temperature 25°C)*

#### Main Features

- Frequency band : 9.2-10.8 GHz
- Pout @3dB Gain compression : 29.5 dBm
- P.A.E @3dB Gain Compression : 40 %
- Two biasing modes:
  - Digital control thanks to TTL interface
  - Analog control thanks to biasing circuit
- Chip size: 2.87 x 1.47 x 0.1 mm<sup>3</sup>

#### Main Characteristics

Tamb = +25°C, Vc = +7.5V (Pulse 100µs 20%)

Symbol	Parameter	Min	Typ	Max	Unit
Fop	Operating frequency range	9.2		10.8	GHz
G	Small signal gain	21	23		dB
P3dB	Output power at 3dB compression		29.5		dBm
Icq	Power supply quiescent current		200		mA

ESD Protections : Electrostatic discharge sensitive device observe handling precautions

## Electrical Characteristics

Vc= +7.5V (Pulse 100µs 20%)

Symbol	Parameter	Min	Typ	Max	Unit
Fop	Operating frequency range	9.2		10.8	GHz
G	Small signal gain at 25°C	21	22.5		dB
ΔG	Small signal gain flatness at 25°C		±0.5		dB
ΔG_T	Linear gain variation vs temperature		-0.025		dB/°C
Pin	Input Power (1)			17	dBm
P1dB	Output power at 1dB gain compression at 25°C		28		dBm
P3dB	Output power at 3dB gain compression at 25°C	27.5	29.5		dBm
	Output power at 3dB gain compression at 80°C	27	29		
PAE_3dBc	PAE at 3dB gain compression at 25°C		40		%
	PAE at 3dB gain compression at 80°C		37		
dBS11	Input Return Loss		-12	-10	dB
dBS22	Output Return Loss		-10	-7	dB
Vc	Power supply voltage		7.5		V
Icq	Power supply quiescent current (2)		200		mA
Ic_3dBc	Consumption under 3dB compression		290		mA
Vctrl	Collector current control voltage		5		V
Ictrl	Biasing circuit consumption		5		mA
I_Tl	TTL input consumption		1		mA
TI_Low	TTL input voltage low level		0	0.4	V
TI_High	TTL input voltage high level (2)	2.5	5		mA

(1) Output Load 50Ω

(2) For Vc=7.5V, TTL interface settles Icq to 200 mA when TI=TI\_High . If needed, Icq can be tuned thanks to Vctrl if the analog biasing circuit is used

## Absolute Maximum Ratings (3)

Tamb = 25°C

Symbol	Parameter	Values	Unit
Top	Operating temperature range	-40 to +80	°C
Vc	Power supply voltage (4)	10	V
Icq	Power supply quiescent current	320	mA
Ic_sat	Power supply current in saturation	350	mA
Vct	Collector current control voltage	6.5	V
Tj	Maximum Junction temperature	175	°C
Tstg	Storage temperature range	-55 to +125	°C

(3) Operation of this device above anyone of these parameters may cause permanent damage.

(4) Without RF input power

Typical measurement characteristics

Measurement conditions :

Vc=7.5V

TTL interface used for biasing. TI\_High=5V and TI\_Low=0V (Ic Quiescent=200mA)

Pulse width=100µs, Duty cycle= 20%

Linear gain versus frequency and temperature

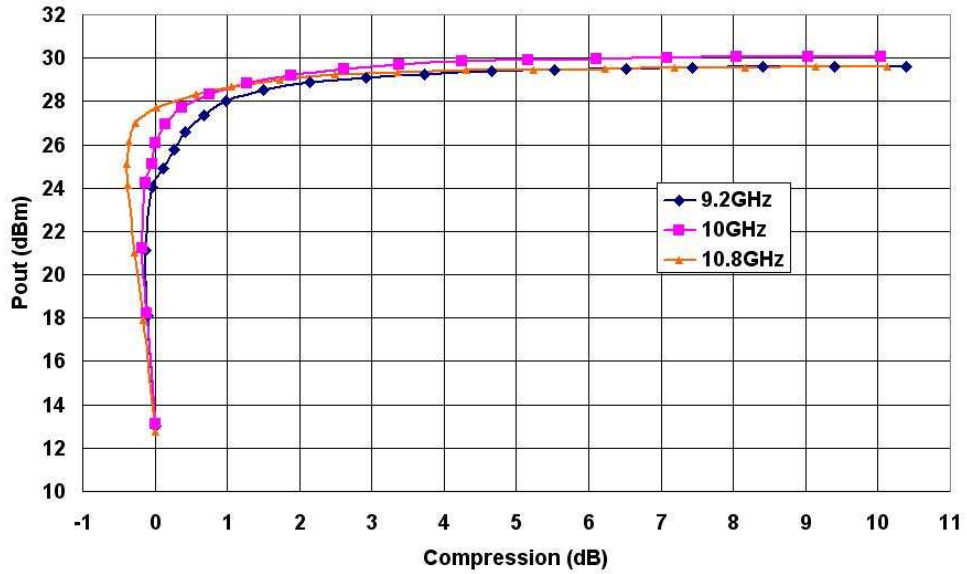

Output power @3dB gain compression versus frequency and temperature

**Power added efficiency @3dB gain compression versus frequency and temperature**

**Collector current @3dB gain compression versus frequency and temperature**

Output power versus gain compression and frequency (Temp.=25°C)

Output power versus Pin and frequency (Temp.=25°C)

**Collector current versus input power and temperature @10GHz**

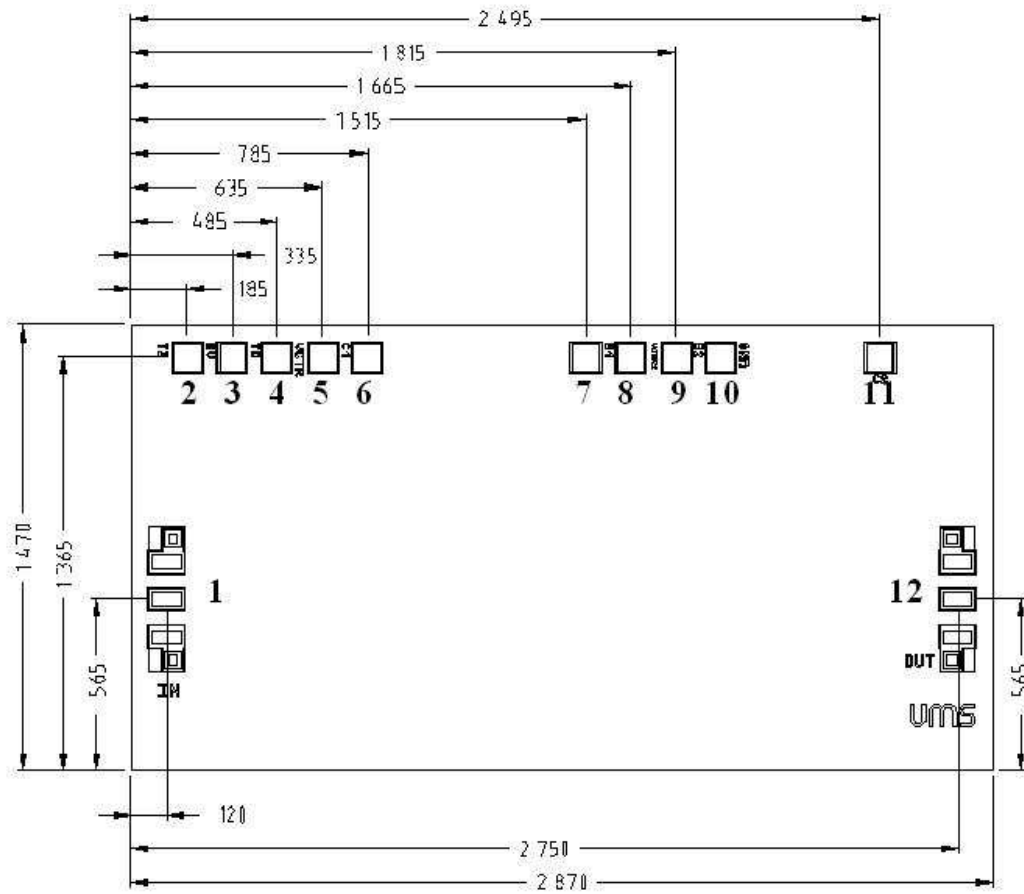

**Collector quiescent current versus TI, Vctrl and temperature**

Control current versus  $V_{ctrl}$  and temperature

## Chip Mechanical Data and Pin references

UNITS :  $\mu\text{m}$   
 Tol :  $\pm 35\mu\text{m}$

Chip thickness =  $100 \pm 10 \mu\text{m}$   
 RF pads (1, 12) =  $118 \times 68 \mu\text{m}^2$   
 DC pads (2, 3, 4, 5, 9, 6, 7, 8, 9, 10, 11) =  $96 \times 96 \mu\text{m}^2$

Pin number	Pin name	Description
1	IN	Input RF port
7, 9		NC
5, 8	Vctrl	Collector current control voltage
2	TI	TTL input
4	TO	TTL output
10	GND	Ground (NC)
3, 6, 11	Vc	Power supply voltage
12	OUT	Output RF port

**Bonding recommendations**

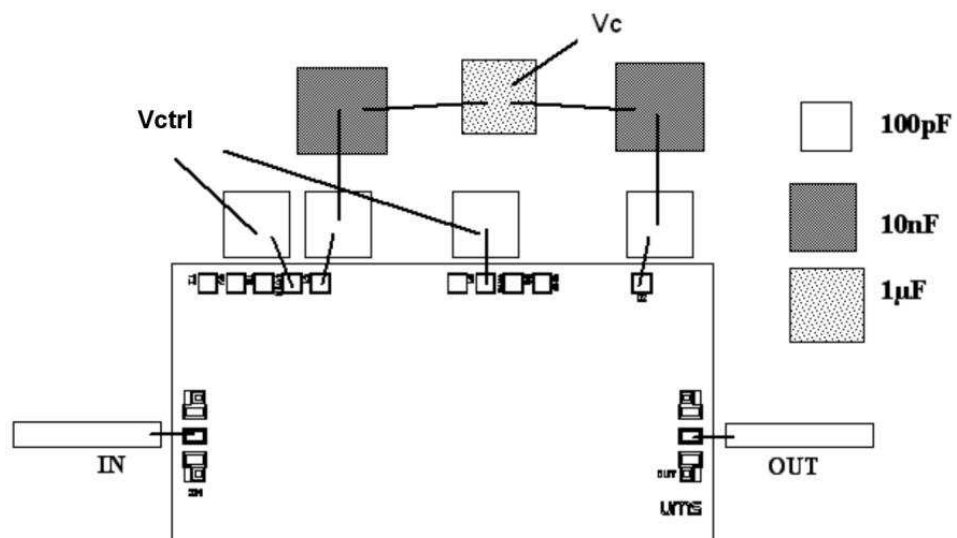

Port	Connection
IN (1)	Inductance ( $L_{bonding}$ ) = 0.3nH 400 $\mu$ m length with wire diameter of 25 $\mu$ m
OUT (12)	Inductance ( $L_{bonding}$ ) = 0.3nH 400 $\mu$ m length with wire diameter of 25 $\mu$ m

**Assembly recommendations in test fixture using TTL interface**

Note: when the TTL interface is used for biasing, the pin TO (pin number 4) must be connected to the pins Vctrl (pins number 5 and 8).

**Assembly recommendations in test fixture using analog biasing circuits**

## Recommended ESD management

Refer to the application note AN0020 available at <http://www.ums-gaas.com> for ESD sensitivity and handling recommendations for the UMS products.

## Ordering Information

Chip form : CHA5012-99F/00
