

Description

The VNL5050N3-E and VNL5050S5-E are monolithic devices made using STMicroelectronics VIPower[®] Technology, intended for driving resistive or inductive loads with one side connected to the battery.

Built-in thermal shutdown protects the chip from overtemperature and short-circuit. Output current limitation protects the devices in an overload condition. In case of long duration overload, the devices limit the dissipated power to a safe level up to thermal shutdown intervention. Thermal shutdown, with automatic restart, allows the devices to recover normal operation as soon as a fault condition disappears. Fast demagnetization of inductive loads is achieved at turn-off.

Features

Type	V _{clamp}	R _{DS(on)}	I _D
VNL5050N3-E	41 V	50 mΩ	19 A
VNL5050S5-E			

- Automotive qualified
- Drain current: 19 A
- ESD protection
- Overvoltage clamp
- Thermal shutdown
- Current and power limitation
- Very low standby current
- Very low electromagnetic susceptibility
- Compliant with European directive 2002/95/EC
- Open drain status output (VNL5050S5-E only)

2 Absolute maximum rating

Stressing the device above the rating listed in the [Table 4](#) may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the operating sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

3.2 MCU I/O protection

ST suggests to insert a resistor (R_{prot}) in line to prevent the microcontroller I/O pins from latching up^(a). The value of these resistors is a compromise between the leakage current of microcontroller and the current required by the LSD I/Os (input levels compatibility) with the latch-up limit of microcontroller I/Os:

Equation 1

$$\frac{0.7}{I_{\text{latchup}}} \leq R_{\text{prot}} \leq \frac{(V_{\text{OH}\mu\text{C}} - V_{\text{IH}})}{I_{\text{IH max}}}$$

Let:

- $I_{\text{latchup}} \geq 20 \text{ mA}$
- $V_{\text{OH}\mu\text{C}} \geq 4.5 \text{ V}$
- $35 \Omega \leq R_{\text{prot}} \leq 100 \text{ K}\Omega$

Then, the recommended value is $R_{\text{prot}} = 1 \text{ K}\Omega$

[Figure 18](#) shows the turn-off current drawn during the demagnetization.

Table 20. Document revision history (continued)

Date	Revision	Changes
25-Jun-2009	2 (continued)	Deleted table 25: SOT-223 mechanical data & package outline Added Figure 27: SOT-223 package dimensions Added Table 18: SOT-223 mechanical data Deleted table 26: SO-8 mechanical data & package outline Added Figure 28: SO-8 package dimensions Added Table 19: SO-8 mechanical data
19-Aug-2009	3	Updated corporate template from V3 to V3-1 Deleted row for $R_{thj-case}$ in Table 5: Thermal data
20-Nov-2009	4	Changed the document title Took the first line off the bullet list for Features on cover page Table 4: Absolute maximum ratings – E_{AS} : added new row Table 6: Power MOS section – V_{supply} : added new row – R_{ON} : updated test conditions Table 8: Input section. – I_{SS} : updated test conditions – Updated the table footnote Table 13: Switching characteristics – Moved footnote 2 and changed its text – W_{ON} : changed typ value – W_{OFF} : changed typ value Table 14: Protection and diagnostics – I_{limH} : updated test conditions – I_{limL} : updated test conditions – t_{dlimL} : changed typ value Updated Figure 7: Static drain source on-resistance vs. drain current Updated Figure 8: Static drain source on-resistance vs. input voltage Updated Figure 9: Static drain source on-resistance vs. drain current Updated Figure 10: Transfer characteristics Added Figure 11: Transfer characteristics (inside view for $V_{IN} = 2 V$ to 3 V) Updated Figure 14: Normalized input threshold vs. temperature Added Section 3.2: MCU I/O protection
19-Sep-2013	5	Updated Disclaimer.
17-Dec-2013	6	Table 4: Absolute maximum ratings: – I_D : updated value Table 8: Input section.: – I_{SS} : updated value Table 12: Supply section: – I_S : updated value Updated Figure 16: VNL5050N3-E application schematic and Figure 17: VNL5050S5-E application schematic Updated Section 3.2: MCU I/O protection
