

U74HC73

CMOS IC

DUAL J-K FLIP-FLOPS WITH CLEAR AND PRESET

DESCRIPTION

The **U74HC73** is a dual J-K negative-edge-triggered flip-flop.

The clear ($\overline{\text{CLR}}$) input can reset the output at a low level, regardless of the level of others inputs. when the $\overline{\text{CLR}}$ is inactive(high), data at the data inputs meeting the set-up time requirements are transferred to the outputs on the negative-going edge of the clock pulse. Following the hold-time interval, data J and k inputs can be changed without affecting the levels at the outputs.

SOP-14

FEATURES

- * Wide supply voltage range from 2.0V to 6.0V
- * Low static power consumption; $I_{CC}=4\mu\text{A}$ (Max.)
