

### Product Description

Qorvo's QPA1008 is an S-band two stage variable gain driver amplifier in a 5x5 mm QFN. The QPA1008 operates from 2.7 to 3.8 GHz and provides 31dBm of P1dB output power with 26 dB of large signal gain and greater than 30% PAE. The QPA1008 includes a 30 dB attenuator at the input, and a simple resistively coupled (~20 dB coupling) power sampler detector at the output. The amplifier has a fast bias control switch for quick turn on and off operation.

Lead-free and RoHS compliant.  
Evaluation Boards are available upon request.

#### Notes:

If operating near  $P_{SAT}$ , 20 dB (>3W) attenuation pad is recommended at the output of the device to protect test equipment. For this EVB, the Attenuation control is reversed compared to the design requirements and the final production product.
