

## ADJUSTABLE PRECISION SHUNT REGULATORS

---

### Introduction

#### (General Description)

The EC50431S series ICs are three-terminal adjustable shunt regulators with guaranteed thermal stability over a full operation range. These ICs feature sharp turn on characteristics, low temperature coefficient and low output impedance, which make them ideal substitutes for Zener diodes in applications such as switching power supply, charger and other adjustable regulators.

The EC50431S series ICs contain two voltage types, 36V. The output voltage of both types can be set to any value between  $V_{REF}$  (2.50V) and the corresponding maximum cathode voltage.

The EC50431S precision reference is offered in two bandgap tolerance: 0.5%.

These ICs are available SOT-23-3

### Applications

- Voltage Adapter
- Switching Power Supply
- Graphic Card
- Precision Voltage Reference

### Features

- Programmable Precise Output Voltage from  $V_{REF}$  to 36V.
- Very Accurate Reference Voltage: 0.5% Typical
- High Stability under Capacitive Load
- Sink Current Capacity from 1 mA to 100 mA
- Low Output Noise
- Wide Operating Range of -40°C to 85°C
- Available in RoHS Compliant Packages.

Package Thermal Impedance	$\theta_{JA}$	405	°C/W
Power Dissipation, $T_A=25^\circ\text{C}$	$P_D$	0.309	W

**Note 1:** Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are Stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to "Absolute Maximum Ratings" for extended periods may affect device reliability
