1 Add R1 at end of part number for 7 inch (1K parts), R2 for 13 inch (2.5K parts) Tape & Reel.

2 Date Code "YWW" on underside of part.

DESCRIPTION

The AZG489 is a multiple output cable driver specifically designed to drive coaxial video cables. The device is especially useful in Digital Video Broadcasting applications. Each output has its own output stage and thus each is isolated from the other outputs.

The driver has a voltage gain of approximately 40 and produces an output swing of 1.6 volts, twice as large as a standard PECL output. When driving a coaxial cable, proper termination is required at both ends of the cable to minimize reflections. The 1.6V output signal allows for termination at both ends of the cable, while providing an 800mV signal at the receiving end of the cable.

The driver accepts a standard differential PECL input and can be powered with a 5.0V supply. Under open input conditions internal input clamps will force all outputs HIGH.

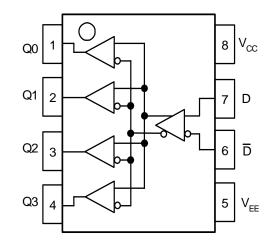

Additional power supply filtering is required because of the large amount of in-phase output current. A capacitor (0.1 μ F minimum) must bypass V_{CC} to V_{EE} in close proximity to the AZG489. A ferrite bead (1K Ω @ 100 MHz) must be placed in series to the V_{EE} pin. Additional capacitance may be required based on board layout. See Figure 1 for further information.

NOTE: The specifications in the PECL table are valid when thermal equilibrium is established. The maximum junction temperature is 125°C. Thermal management may be required in some applications to ensure the junction temperature does not exceed that value.

PIN DESCRIPTION

PIN	FUNCTION
D, D	PECL Data Inputs
D, D Q0, Q1, Q2, Q3	Data Outputs (1.6V _{PP}) Positive Supply Negative Supply
V _{CC}	Positive Supply
V _{EE}	Negative Supply

Symbol	Characteristic	Rating	Unit
V _{CC}	PECL Power Supply $(V_{EE} = 0V)$	0 to +8.0	Vdc
VI	PECL Input Voltage $(V_{EE} = 0V)$	0 to +6.0	Vdc
I _{OUT}	Output Current — Continuous — Surge	50 100	mA
T _A	Operating Temperature Range	-40 to +85	°C
T _{STG}	Storage Temperature Range	-65 to +150	°C

Absolute Maximum Ratings are those values beyond which device life may be impaired.

Each output is terminated through a 150Ω resistor to Ground with an additional AC load of 150Ω to Ground. See Figure 1 for circuit used. 1.

2. 3. V_{PP} is the minimum peak-to-peak differential input swing for which AC parameters are guaranteed. The device has a DC gain of ≈ 40 . The V_{CMR} range is referenced to the most positive side of the differential input signal. Normal operation is obtained if the HIGH level falls within the specified range and the peak-to-peak voltage lies between V_{PP} (Minimum Input Swing) and 1V.

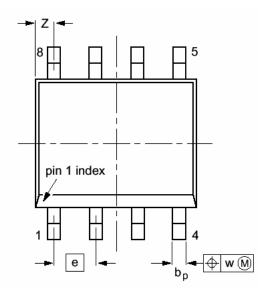

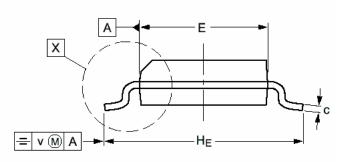

3. DC load resistor value range: 100Ω to 200Ω .

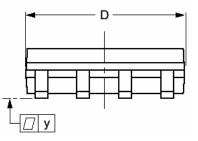

4. Typical values, select as needed for application.
