

Dual Channel Slotted Optical Switches

Types OPB826S, OPB826SD

Features

- Dual channels over/under
- Direction of travel sensing
- Single or double apertures for high resolution
- 0.100" (2.54 mm) wide slot
- OPB826S (apertures on sensors only)
- OPB826SD (apertures on both emitters and sensors)

Description

The OPB826S and OPB826SD each consist of two infrared emitting diodes and two NPN silicon phototransistors mounted in an over/under configuration on opposite sides of a 0.100" (2.54 mm) wide slot. Phototransistor switching takes place when an opaque object passes through the slot. The OPB826S has 0.010" (0.25 mm) by 0.040" (1.02 mm) apertures in front of both phototransistors. The OPB826SD has the same sized apertures in front of both phototransistors and both emitters. Dual channels enable direction of travel sensing. The low cost IR transmissive plastic housing reduces possible interference from ambient light and provides dust and dirt protection.

Dual channel (side-by-side) configuration available as OPB822 series.
