

## FEATURES

- 10 mbar to 5 bar,  
absolute, gage or differential pressure
- Barometric pressure ranges
- Digital SPI bus and analog output
- Precision ASIC signal conditioning
- Calibrated and temperature  
compensated
- Matched pressure port volumes
- Miniature SMD housings
- RoHS compliant
- Sensortronics PRO services

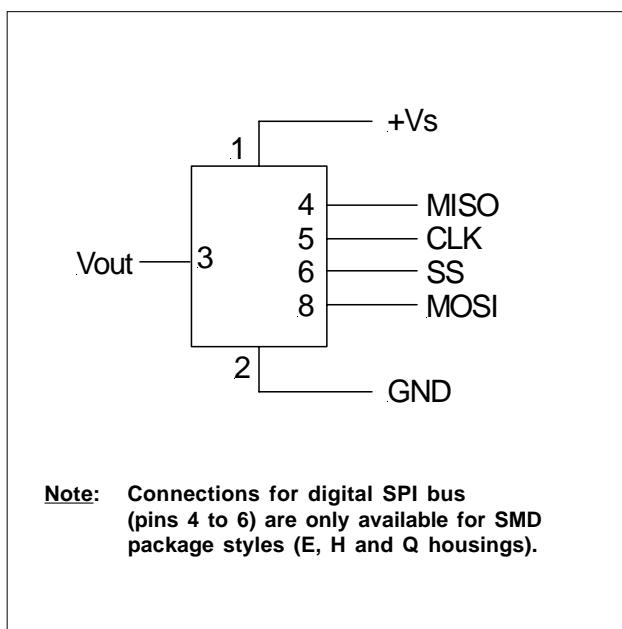

## SPECIFICATIONS

### Maximum ratings

Supply voltage $V_s$	
HCE...3	2.7 ... 3.3 V <sub>DC</sub>
HCE...5	4.5 V ... 5.5 V <sub>DC</sub> max. 6.50 V <sub>DC</sub>
Output current	
Sink	1 mA
Source	1 mA
Lead specifications	
Average preheating temperature gradient	2.5 K/s
Soak time	ca. 3 min
Time above 217°C	50 s
Time above 230°C	40 s
Time above 250°C	15 s
Peak temperature	260°C
Cooling temperature gradient	-3.5 K/s
Temperature ranges <sup>6</sup>	
Compensated	0 ... 85°C
Operating	-25 ... 85°C
Storage	-40 ... 125°C
Humidity limits (non-condensing)	0 ... 95 %RH

### ELECTRICAL CONNECTION

## PRESSURE SENSOR CHARACTERISTICS

( $T_A = 25^\circ\text{C}$ )

Part no.	Operating pressure	Proof pressure <sup>3,5</sup>	Burst pressure <sup>4,5</sup>
HCEM010...B...	0...±10 mbar	250 mbar	500 mbar
HCEM020...B...	0...±20 mbar	500 mbar	750 mbar
HCEM050...B...	0...±50 mbar	750 mbar	1.2 bar
HCEM100...B...	0...±100 mbar	1.2 bar	2 bar
HCEM200...B...	0...±200 mbar	2 bar	2 bar
HCEM500...B...	0...±500 mbar	2 bar	2 bar
HCEB001...B...	0...±1 bar	3 bar	5 bar
HCEM010...U...	0...10 mbar	250 mbar	500 mbar
HCEM020...U...	0...20 mbar	500 mbar	750 mbar
HCEM050...U...	0...50 mbar	750 mbar	1.2 bar
HCEM100...U...	0...100 mbar	1.2 bar	2 bar
HCEM200...U...	0...200 mbar	2 bar	2 bar
HCEM500...U...	0...500 mbar	2 bar	2 bar
HCEB001...U...	0...1 bar	3 bar	5 bar
HCEB002...U...	0...2 bar	6 bar	7 bar
HCEB005...U...	0...5 bar	7 bar	7 bar
HCE0611AR...	600...1100 mbar(a)	3 bar	5 bar
HCE0811AR...	800...1100 mbar(a)	3 bar	5 bar

Other pressure ranges are available on request. Please contact Sensortechnics.

### Specification notes:

1. Total accuracy is the combined error from offset and span calibration, linearity, pressure hysteresis, and temperature effects. Linearity is the measured deviation based on a straight line. Hysteresis is the maximum output difference at any point within the operating pressure range for increasing and decreasing pressure. Calibration errors include the deviation of offset and full scale from nominal values.
2. Full Scale Span (FSS) is the algebraic difference between the output signal for the highest and lowest specified pressure.
3. Proof pressure is the maximum pressure which may be applied without causing durable shifts of the electrical parameters of the sensing element.
4. Burst pressure is the maximum pressure which may be applied without causing damage to the sensing element or leaks to the housing.
5. The HCE common mode pressure is 2 bar for all devices up to 500 mbar and 7 bar for all other devices. Common mode pressure is the maximum pressure that can be applied to both ports of a differential pressure sensor simultaneously without damaging the sensor housing.
6. Extended temperature ranges on request. Please contact Sensortechnics.
7. Max. delay time between pressure change at the pressure die and signal change at the output.
8. The response time depends on the adjusted internal A/D resolution of the sensor. For 14 bit it is typ. 1 ms. Other A/D resolutions and response times are available on request. Please contact Sensortechnics for further information.
9. Sensors with lower current consumption are available on request. Please contact Sensortechnics for further information.

Output at min. specified pressure	0.24	0.25	0.26	

## SPI - SERIAL PERIPHERAL INTERFACE

### Introduction

The HCE is capable to generate a digital output signal. The device runs a cyclic program, which will store a corrected sensor value with 14 bit resolution about every 500 µs within the output registers of the internal ASIC. This cyclic program runs independent from the bus communication. In order to use the pressure sensor for digital signal readout, it should be connected to a SPI Master device.

SPI specifies four signals: The clock (CLK) is generated by the master and input to all slaves. MOSI carries data from master to slave. MISO carries data from slave back to master. A slave select line (SS) allows individual selection of a slave device.

### SPI Modes

A pair of parameters called clock polarity (CPOL) and clock phase (CPHA) determine the edges of the clock signal on which the data are driven and sampled. Each of the two parameters has two possible states, which allows for four possible combinations, all of which are incompatible with one another.

In general the HCE series supports all combinations of clock phase (CPHA) and polarity (CPOL). By default it is programmed to CPHA = 0 and CPOL = 0, which means that data transmission starts with the rising first clock edge (see Fig 1).

### Slave select

The falling edge of the SS line indicates the beginning of the transfer. Additionally the SS line must not be negated and reasserted between the three bytes to be transmitted.

### Data operation

The MOSI line should always be set to high level. So there is no data transmission from master to slave. Because of internal configuration the slave will answer the first byte with an FF<sub>hh</sub>. The second and third byte contain the 15 bit pressure information (see Fig. 2).

**For further information please refer to  
Sensortechnics SPI bus application note**

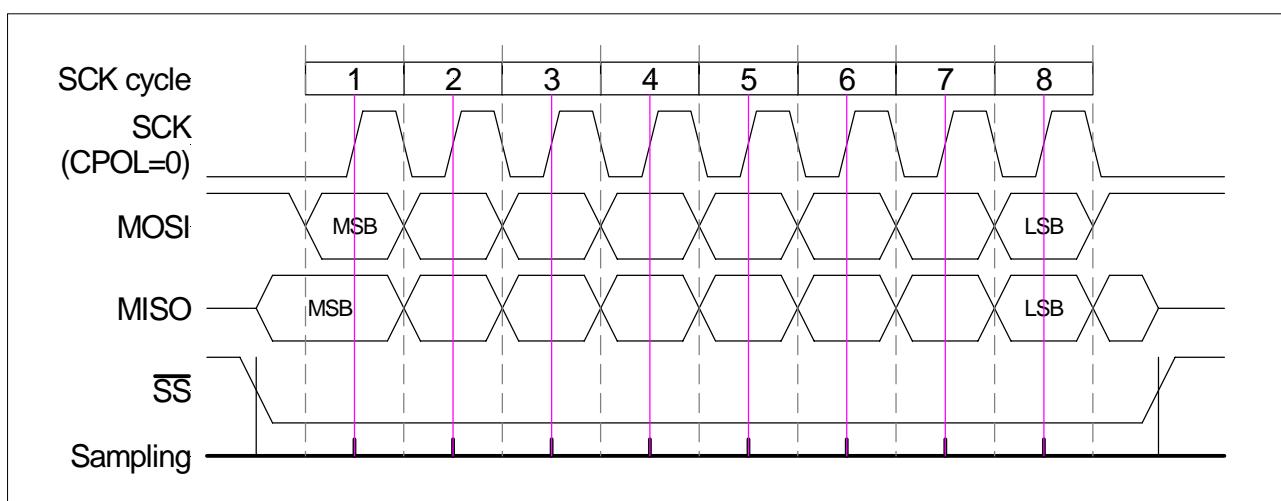

Fig. 1: Example of a standard 1 byte SPI data transfer for CPHA=0 and CPOL=0

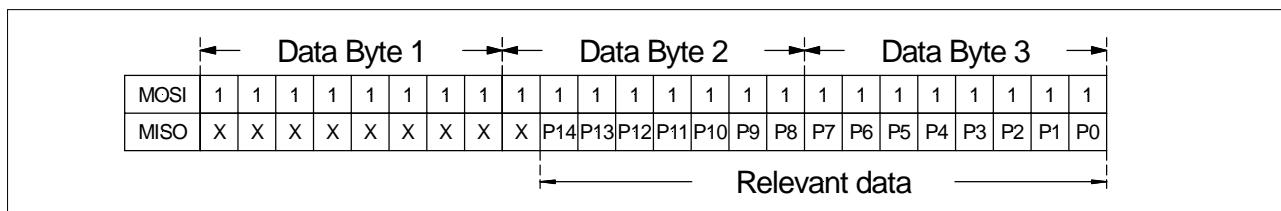

Fig. 2: 3 byte data stream between HCE sensor and master containing the pressure value as a 15 bit information

## SPI - SERIAL PERIPHERAL INTERFACE (cont.)

### Interface parameters

Parameter	Symbol	Min.	Typ.	Max.	Unit
Input high level		90		100	% of Vs
Input low level		0		10	
Output low level				10	
Pull-up resistor		500			
Load capacitance @ MISO	$C_{MISO}$			400	pF
Input capacitance @ each pin	$C_{SPI\_IN}$			10	
Signal clock frequency	$f_{SCK}$	100*		640	kHz
MISO hold time after SCK sample slope	$t_{SPI\_HD\_MISO}$	200			ns
MOSI setup time before SCK sample slope	$t_{SPI\_SU\_MOSI}$	$2/f_{CLK}$			
/SS setup time before SCK sample slope	$t_{SPI\_SU\_SS}$	10			ns

\* recommended

**Note:** Sensortechnics recommends communication speeds of at least 100 kHz (max. 640 kHz). Please contact your nearest SensorTechnics sales office for further information.

### ORDERING INFORMATION

Options	Series	Pressure range		Pressure mode		Calibration		Housing		Porting		Grade		Voltage		
		A*	B	D	U	R*	E*	H**	8*	9**	P	Prime	3	3 V	5	5 V
HCE	0611	600...1100 mbar						SMD, 2 ports, same side								
	0811	800...1100 mbar						SMD, 1 port								
	M010		10 mbar													
	M020		20 mbar													
	M050		50 mbar													
	M100		100 mbar													
	M200		200 mbar													
	M500		500 mbar													
	B001		1 bar													
	(B001A)		1 bara													
	B002		2 bar													
	B005		5 bar													
				* only available for pressure ranges 0611, 0811, B001, B002		* for pressure ranges 0611, 0811		Housings Q only available up to 1 bar. Please contact Sensortechnics.		* standard for devices up to 500 mbar and barometric ranges						
						* standard for differential devices, "D"		** standard for absolute and gage devices, "A" and "G"		** standard for devices from 1 bar						
Example: HCE M050				D	B	E		8		P		5				

Note: Devices highlighted in grey are preferred stock items

#### Custom specific pressure ranges and mechanical or electronic sensor modifications are widely available:

- I<sup>2</sup>C, switching and custom specific outputs
- Dual inline packages (DIP)
- Single inline packages (SIL)
- ... etc.

Please contact your nearest Sensortechnics sales office for further information.

#### Sensortechnics PRO services:

- Extended guarantee period of 2 years
- Custom product modifications and adaptations even for small quantities
- Advanced logistics models for supply inventory and short delivery times
- Technical support through application engineers on the phone or at your site
- Traceability of each sensor through serial numbers on request
- No product specification changes without customer notification
- No product obsolescence without very early prior notice
- Fastest possible technical response for design and QA engineers
- Long term product availability for your spares and service needs
- ... plus other services on request

Sensortechnics reserve the right to make changes to any products herein. Sensortechnics do not assume any liability arising out of the application or use of any product or circuit described herein, neither does it convey any license under its patent rights nor the rights of others.
