# MASW20000

## GaAs SPDT Switch DC - 20 GHz

#### Features

- Very Broadband Performance
- Low Insertion Loss: 1.75 dB Typical @ 18 GHz
- High Isolation: 50 dB Typical @ 18 GHz
- Fast Switching Speed: 2 ns Typical
- Reflective Configuration
- Ultra Low DC Power Consumption
- Via Hole Grounding

### Description

M/A-COM's MASW20000 is a versatile, high isolation SPDT switch. Designed on M/A-COM's mature 1-micron MESFET process, this parts is ideal for modules or other packaging for use in the Cellular, GPS, LAN and infrastructure markets.

Demonstrating performance up to 20 GHz, the MASW20000 will perform well in many types of applications within that range.

5.  $V_{IN}$  Low = 0 to -0.2 V,  $V_{IN}$  Hi = -5V

6. For normal SPDT operation A1 is connected to B2 and A2 is connected to B1.

#### **Handling Procedures**

Please observe the following precautions to avoid damage:

#### Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

### **Handling Procedures**

Permanent damage to the MASW20000 may occur if the following precautions are not adhered to:

- A. Cleanliness The MASW20000 should be handled in a clean environment. DO NOT attempt to clean assembly after the MASW20000 is installed.
- B. Static Sensitivity All die handling equipment and personnel should be DC grounded.
- C. Transients Avoid instrument and power supply transients while bias is connected to the MASW20000. Use shielded signal and bias cables to minimize inductive pick-up.
- D. Bias Apply voltage to either control port A1/B2 or A2/B1 only when the other is grounded. Neither port should be allowed to "float".
- E. General Handling It is recommended that the MASW20000 chip be handled along the long side of the die with a sharp pair of bent tweezers. DO NOT touch the surface of the chip with fingers or tweezers.

#### Mounting

The MASW20000 is back-metallized with Pd/Ni/Au (100/1,000/30,000Å) metallization. It can be die-mounted using Au/Sn eutectic preforms or a thermally conductive epoxy. The package surface should be clean and flat before attachment.

#### Eutectic Die Attach:

- A. An 80/20 Au/Sn preform is recommended with a work surface temperature of approximately 255°C and a tool temperature of 265°C. When hot 90/10 nitrogen/hydrogen gas is applied, solder temperature should be approximately 290°C.
- B. DO NOT expose the MASW20000 to a temperature greater than 320°C for more than 20 seconds. No more than 3 seconds of scrubbing should be required for attachment.

Epoxy Die Attach:

- A. Apply a minimum amount of epoxy and place the MASW20000 into position. A thin epoxy fillet should be visible around the perimeter of the die.
- B. Cure epoxy per manufacturer's recommended schedule.
- C. Electrically conductive epoxy is recommended but is not required.

### Wire Bonding

- A. Ball or wedge bond with 1.0 mil diameter pure gold wire. Gold ribbon (3.0 mil x 0.5 mil) may also be used. Thermo sonic wire bonding with a nominal stage temperature of 150°C and a ball bonding force of 40 to 50 grams or wedge bonding force of 18 to 22 grams is recommended. Ultrasonic energy and time should be adjusted to the minimum levels to achieve reliable wirebonds.
- B. Wirebonds should be started on the chip and terminated on the package.
