

Product may not be to scale

The PWA series resistor chips offer a 500 mW power rating in a small size. These offer one of the best combinations of size and power available.

The PWAs are manufactured using Vishay Electro-Films (EFI) sophisticated thin film equipment and manufacturing technology. The PWAs are 100 % electrically tested and visually inspected to MIL-STD-883.

## **FEATURES**

**Thin Film Power Resistors** 

- · Wire bondable
- 500 mW power
- Chip size: 0.030 x 0.045 inches
- Resistance range 0.3  $\Omega$  to 1 M $\Omega$
- Oxidized silicon substrate for good power dissipation
- Resistor material: Tantalum nitride, self-passivating

#### **APPLICATIONS**

The PWA resistor chips are used mainly in higher power circuits of amplifiers where increased power loads require a more specialized resistor.
