## - $1.65-\mathrm{V}$ to $5.5-\mathrm{V} \mathrm{V}_{\mathrm{CC}}$ Operation

- Useful for Both Analog and Digital Applications
- Specified Break-Before-Make Switching
- Rail-to-Rail Signal Handling
- High Degree of Linearity
- High Speed, Typically 0.5 ns ( $\mathrm{V}_{\mathrm{CC}}=3 \mathrm{~V}, \mathrm{C}_{\mathrm{L}}=50 \mathrm{pF}$ )

DBV PACKAGE (TOP VIEW)

DCK PACKAGE
(TOP VIEW)

- Low On-State Resistance, Typically $\approx 6 \Omega$ ( $\mathrm{V}_{\mathrm{CC}}=4.5 \mathrm{~V}$ )
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Protection Exceeds JESD 22
- 2000-V Human-Body Model (A114-A)
- 200-V Machine Model (A115-A)
- 1000-V Charged-Device Model (C101)

See mechanical drawings for dimensions.

## description/ordering information

This single-pole, double-throw (SPDT) analog switch is designed for $1.65-\mathrm{V}$ to $5.5-\mathrm{V} \mathrm{V}_{\mathrm{CC}}$ operation.
The SN74LVC1G3157 can handle both analog and digital signals. The device permits signals with amplitudes of up to $\mathrm{V}_{\mathrm{CC}}$ (peak) to be transmitted in either direction.
Applications include signal gating, chopping, modulation or demodulation (modem), and signal multiplexing for analog-to-digital and digital-to-analog conversion systems.

ORDERING INFORMATION

| $\mathrm{T}_{\mathrm{A}}$ | PACKAGE $\dagger$ |  | ORDERABLE PART NUMBER | TOP-SIDE MARKING $\ddagger$ |
| :---: | :---: | :---: | :---: | :---: |
| $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$ | NanoStarTM - WCSP (DSBGA) $0.23-\mathrm{mm}$ Large Bump - YEP | Tape and reel | SN74LVC1G3157YEPR | -_-C5_ |
|  | NanoFree ${ }^{\text {TM }}$ - WCSP (DSBGA) 0.23 -mm Large Bump - YZP (Pb-free) |  | SN74LVC1G3157YZPR |  |
|  | SOT (SOT-23) - DBV | Tape and reel | SN74LVC1G3157DBVR | CC5 |
|  | SOT (SC-70) - DCK | Tape and reel | SN74LVC1G3157DCKR |  |
|  | SOT (SOT-553) - DRL | Reel of 4000 | SN74LVC1G3157DRLR | S |

† Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.
$\ddagger$ DBV/DCK: The actual top-side marking has one additional character that designates the assembly/test site.
YEP/YZP: The actual top-side marking has three preceding characters to denote year, month, and sequence code, and one following character to designate the assembly/test site. Pin 1 identifier indicates solder-bump composition ( $1=\mathrm{SnPb}, \bullet=\mathrm{Pb}$-free).

## logic diagram (positive logic)

## absolute maximum ratings over operating free-air temperature range (unless otherwise noted) $\dagger$

$$
\text { Supply voltage range, } \mathrm{V}_{\mathrm{CC}} \text { (see Note 1) . ......................................................... . . } 0.5 \mathrm{~V} \text { to } 6.5 \mathrm{~V}
$$

Control input voltage range, $\mathrm{V}_{\mathrm{IN}}$ (see Notes 1 and 2) ......................................... 0.5 V to 6.5 V

On-state switch current, $\mathrm{I}_{/ / \mathrm{O}}\left(\mathrm{V}_{\mathrm{I} / \mathrm{O}}=0\right.$ to $\left.\mathrm{V}_{\mathrm{CC}}\right)$ (see Note 5) ........................................ $\pm 128 \mathrm{~mA}$

Package thermal impedance, $\theta_{\mathrm{JA}}$ (see Note 6): DBV package . .................................... $165^{\circ} \mathrm{C} / \mathrm{W}$
DCK package ..................................... $259^{\circ} \mathrm{C} / \mathrm{W}$
DRL package ...................................... $142^{\circ} \mathrm{C} / \mathrm{W}$
YEP/YZP package ................................... 123² $\mathrm{C} / \mathrm{W}$
Storage temperature range, $T_{\text {stg }}$ $-65^{\circ} \mathrm{C}$ to $150^{\circ} \mathrm{C}$
$\dagger$ Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
NOTES: 1. All voltages are with respect to ground unless otherwise specified.
2. The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
3. This value is limited to 5.5 V maximum.
4. $\mathrm{V}_{\mathrm{I}}, \mathrm{V}_{\mathrm{O}}, \mathrm{V}_{\mathrm{A}}$, and $\mathrm{V}_{\mathrm{Bn}}$ are used to denote specific conditions for $\mathrm{V}_{\mathrm{I} / \mathrm{O}}$.
5. II, $\mathrm{I}_{\mathrm{O}}, \mathrm{I}_{\mathrm{A}}$, and $\mathrm{I}_{\mathrm{Bn}}$ are used to denote specific conditions for $\mathrm{I}_{\mathrm{I}} / \mathrm{O}$.
6. The package thermal impedance is calculated in accordance with JESD 51-7.

## recommended operating conditions (see Note 7)

${ }^{(1)}$ The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.
${ }^{(2)}$ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS) or Green (RoHS \& no $\mathrm{Sb} / \mathrm{Br}$ ) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): Tl's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed $0.1 \%$ by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb -Free products are suitable for use in specified lead-free processes.
Green (RoHS \& no $\mathbf{S b} / \mathrm{Br}$ ): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of $\mathrm{Bromine}(\mathrm{Br}$ ) and Antimony ( Sb ) based flame retardants ( Br or Sb do not exceed $0.1 \%$ by weight in homogeneous material)
${ }^{(3)}$ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

Important Information and Disclaimer:The information provided on this page represents Tl's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

DBV (R-PDSO-G6)
PLASTIC SMALL-OUTLINE PACKAGE

NOTES: A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
D. Leads $1,2,3$ may be wider than leads $4,5,6$ for package orientation.

Falls within JEDEC MO-178 Variation $A B$, except minimum lead width.

NOTES: A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Body dimensions do not include mold flash or protrusion.
D. Falls within JEDEC MO-203

DRL (R-PDSO-N6)

## PLASTIC SMALL OUTLINE

NOTES: A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. JEDEC package registration is pending.

YZP (R-XBGA-N6)

NOTES: A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. NanoFree ${ }^{\text {TM }}$ package configuration.
D. This package is lead-free. Refer to the 6 YEP package (drawing 4204725) for tin-lead (SnPb).

YEP (R-XBGA-N6)

NOTES: A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. NanoStar ${ }^{T M}$ package configuration.
D. This package is tin-lead (SnPb). Refer to the 6 YZP package (drawing 4204741) for lead-free.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to Tl's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with Tl's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI .

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. Tl is not responsible or liable for such altered documentation.

Resale of Tl products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. Tl is not responsible or liable for any such statements.

[^0]:    $\dagger_{\mathrm{A}}=25^{\circ} \mathrm{C}$
    $\ddagger$ Measured by the voltage drop between I/O pins at the indicated current through the switch. ON resistance is determined by the lower of the voltages on the two (A or B) ports.
    § Specified by design
    II $\Delta r_{o n}=r_{o n(\max )}-r_{o n(\min )}$ measured at identical $V_{C C}$, temperature, and voltage levels.
    \# This parameter is characterized, but not tested in production.
    $\|$ Flatness is defined as the difference between the maximum and minimum values of ON resistance over the specified range of conditions.
    ${ }^{*} l_{\text {off }}$ is the same as $I_{S}$ (off) (off-state switch leakage current).
