- 3. Tolerance: includes set up tolerance, line regulation and load regulation.
- 4. The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on http://www.meanwell.com)
- Every output channel can provide up to the maximum current, but total load can't exceed the rated output power.
 CH3(24V) peak current 20A, ≦1ms, repeatable in every 100ms. CH3(24V) output must be above 16V in the period of peak current.
