

ULTRA-PRECISION 1:8 CML FANOUT BUFFER WITH INTERNAL I/O TERMINATION

Precision Edge[®] SY58031U

FEATURES

- Low-jitter performance:
 - 75fs_{RMS} phase jitter (typ)
- Guaranteed AC performance over temperature and voltage:
 - Clock frequency range: DC to >6GHz
 - <60ps t_r/t_f time
 - <270ps t_{pd}
 - <20ps ouput-to-output skew
- 50Ω source-terminated CML outputs
- 400mV CML output swing into 50 Ω load
- Fully differential I/O

APPLICATIONS

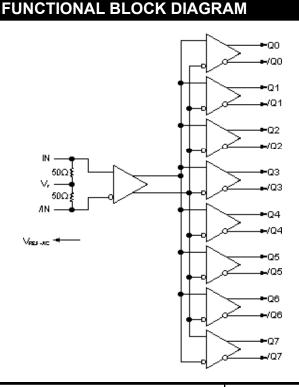

clock distribution

- Accepts an input signal as low as 100mV
- Unique, patent-pending input termination and VT pin accepts DC-coupled and AC-coupled differential inputs: (LVPECL, LVDS, and CML)
- Power supply 2.5V ±5% or 3.3V ±10%
- Industrial temperature range: -40°C to +85°C

■ All SONET and all GigE clock distribution All Fibre Channel clock and data distribution Network routing engine timing distribution

High-end, low-skew multiprocessor synchronous

Available in 32-pin (5mm x 5mm) QFN package

Precision Edge®

DESCRIPTION

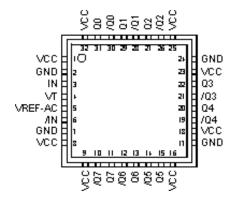

The SY58031U is a 2.5V/3.3V precision, high-speed, fully differential CML 1:8 fanout buffer. The SY58031U is optimized to provide eight identical output copies with less than 20ps of skew and only $75 \mathrm{fs}_{\mathrm{RMS}}$ phase jitter. It can process clock signals as fast as 6GHz.

The differential input includes Micrel's unique, 3-pin input termination architecture that allows the SY58031U to directly interface to CML, LVPECL, and LVDS differential signals (AC- or DC-coupled) without any level-shifting or termination resistor networks in the signal path. The result is a clean, stub-free, low-jitter interface solution. The CML outputs feature 400mV typical swing into 50Ω loads and provide an extremely fast rise/fall time guaranteed to be less than 60ps.

The SY58031U operates from a 2.5V ±5% supply or 3.3V ±10% supply and is guaranteed over the full industrial temperature range (-40°C to +85°C). For applications that require high-speed 1:8 LVPECL fanout buffers, consider the SY58032U and SY58033U. The SY58031U is part of Micrel's high-speed, Precision Edge® product line.

- 2. Tape and Reel.
- 3. Pb-Free package recommended for new designs.

PIN DESCRIPTION

| Pin Number | Pin Name | Pin Function |
|-------------------------------------------------------------------------|-------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3, 6 | IN, /IN | Differential Signal Input: Each pin of this pair internally terminates with 50Ω to the VT pin. Note that this input will default to an indeterminate state if left open. See "Input Interface Applications" section. |
| 4 | VT | Input Termination Center-Tap: Each input terminates to this pin. The VT pin provides a center-tap for each input (IN, /IN) to the termination network for maximum interface flexibility. See "Input Interface Applications" section. |
| 2, 7, 17, 24 | GND, Exposed Pad | Ground. Exposed pad must be connected to a ground plane that is the same potential as the ground pin. |
| 1, 8, 9, 16 18, 23, 25, 32 | VCC | Positive Power Supply: Bypass with $0.1\mu F 0.01\mu F $ low ESR capacitors as close to the pins as possible. |
| 31, 30, 29, 28, 27, 26, 22, 21, 20, 19, 15, 14, 13, 12, 11, 10 | Q0,/Q0, Q1,/Q1, Q2, /Q2, Q3, /Q3, Q4, /Q4, Q5, /Q5, Q6, /Q6, Q7, /Q7 | CML Differential Output Pairs: Differential buffered output copy of the input signal. The CML output swing is typically 400mV into 50Ω . Unused output pairs may be left floating with no impact on jitter. See "CML Output Termination" section. |
| 5 | VREF-AC | Bias Reference Voltage: Equal to V_{CC} –1.2V (typical), and used for AC-coupled applications. See "Input Interface Applications" section. When using V_{REF-AC} , bypass with 0.01µF capacitor to V_{CC} . Maximum sink/source current is 0.5mA. |

Notes:

- 1. Permanent device damage may occur if "Absolute Maximum Ratings" are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum ratings conditions for extended periods may affect device reliability.
- 2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
- 3. Due to the limited drive capability, use for input of the same package only.
- 4. Thermal performance assumes exposed pad is soldered (or equivalent) to the device's most negative potential (GND) on the PCB. ψ_{JB} uses 4-layer θ_{JA} in still-air number unless otherwise stated.
- 5. The circuit is designed to meet the DC specifications shown in the above tables after thermal equilibrium has been established.
- 6. V_{IH} (min) not lower tha 1.2V.

AC ELECTRICAL CHARACTERISTICS⁽⁷⁾

 V_{CC} = 2.5V ±5% or 3.3V ±10%; R_L = 100 Ω across each output pair or equivalent; T_A = -40°C to +85°C, unless otherwise stated.

| Symbol | Parameter | Condition | Min | Тур | Max | Units |
|---------------------------------|-----------------------------------------------------------|----------------------------------------------------|-----|-----|-----|-------|
| f _{MAX} | Maximum Operating Frequency | V _{OUT} ≥ 200mV Clock | 6 | | | GHz |
| t_{pd} | Propagation Delay (IN-to-Q) | | 120 | 230 | 270 | ps |

| t _{JITTER} | RMS Phase Jitter | Output: 622MHz Integration Range: 12kHz - 20MHz | | 75 | | fs |
| t _r , t _f | Output Rise/Fall Time | 20% to 80%, at full output swing | 20 | 45 | 60 | ps |

Notes:

- High frequency AC electricals are guaranteed by design and characterization. All outputs loaded, V_{IN} ≥100mV.
- 8. Output-to-output skew is measured between outputs under identical transitions.
- Part-to-part skew is defined for two parts with identical power supply voltages at the same temperature and with no skew of the edges at the
 respective inputs. Part-to-part skew includes variation in t_{pd}.
