MILITARY SPECIFICATION

SEMICONDUCTOR DEVICE, TRANSISTOR, PNP, GERMANIUM, POWER TYPES 2N1039, 2N1041, 2N2553, 2N2555, 2N2557 AND 2N2559

This specification is mandatory for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

1.1 Scope. This specification covers the detail requirements for PNP, germanium, power, transistors.

1.2 Physical dimensions.

2N1039 and 2N1041 - See figure 1
2N2553 and 2N2555 - See figure 3
2N2557 and 2N2559 - See figure 4

1.3 Maximum ratings.

P_T 1/ $T_C = 25°C$	P_T $T_A = 25°C$			V_{CB}		V_{CE}		V_{EB}	T_{stg}
	2N1039 2/ 2N1041	2N2553 3/ 2N2555	2N2557 4/ 2N2559	2N1039 2N2553 2N2557	2N1041 2N2555 2N2559	2N1039 2N2553 2N2557	2N1041 2N2555 2N2559

2. APPLICABLE DOCUMENTS

2.1 The following documents, of the issue in effect on date of invitation for bids or request for proposal, form a part of the specification to the extent specified herein.

SPECIFICATION

MILITARY

MIL-S-19500 - Semiconductor Devices, General Specification for.

FSC 5961

STANDARDS

MILITARY

MIL-STD-202 - Test Methods for Electronic and Electrical Component Parts.
MIL-STD-750 - Test Methods for Semiconductor Devices.

(Copies of specifications, standards, drawings, and publications required by suppliers in connection with specific procurement functions should be obtained from the procuring activity or as directed by the contracting officer.)

3. REQUIREMENTS

3.1 General. Requirements shall be in accordance with MIL-S-19500, and as specified herein.

3.2 Abbreviations, symbols, and definitions. The abbreviations, symbols, and definitions used herein are defined in MIL-S-19500.

3.3 Design, construction, and physical dimensions. Transistors shall be of the design, construction, and physical dimensions shown on figures 1, 3, and 4.

3.3.1 Lead material and finish. Lead material shall be Kovar or alloy 52. Lead finish shall be gold-plated. (Leads may be tin-plated if specified in the contract or order, and this requirement shall not be construed as adversely affecting the qualified-product status of the device, or applicable JAN marking (see 6.2).

3.3.2 Terminal-lead length. Terminal-lead length (s) other than that specified in figures 1, 3, and 4 may be furnished when so stipulated in the contract or order (see 6.2) where the devices covered herein are required directly for particular equipment-circuit installation or for automatic-assembly-technique programs. Where other lead lengths are required and provided, it shall not be construed as adversely affecting the qualified-product status of the device, or applicable JAN marking.

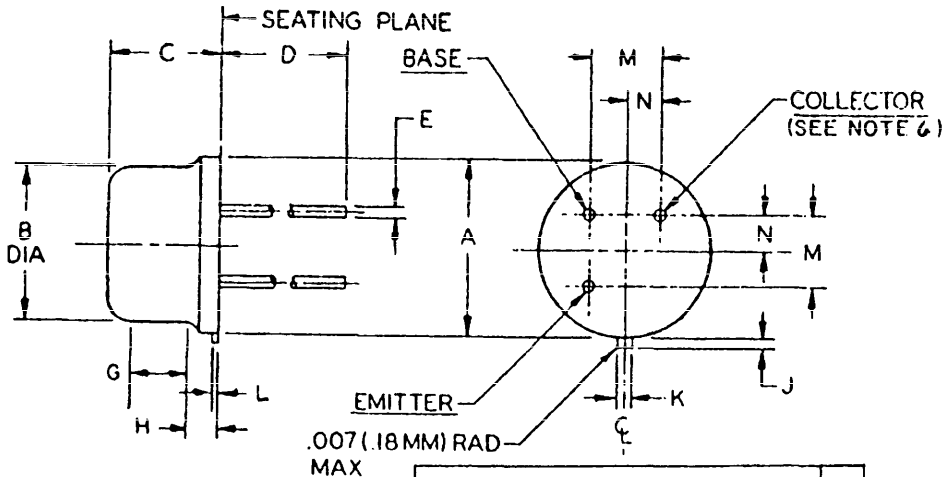
3.4 Performance characteristics. Performance characteristics shall be as specified in tables I, II, and III.

3.5 Marking. The following marking specified in MIL-S-19500 may be omitted from the body of the transistor at the option of the manufacturer:

(a) Country of origin.
(b) Manufacturer's identification.

4. QUALITY ASSURANCE PROVISIONS

4.1 Sampling and inspection. Sampling and inspection shall be in accordance with MIL-S-19500, and as specified herein.



LTR	DIMENSIONS				NOTES
	INCHES		MILLIMETERS

NOTES:

1. Metric equivalents (to the nearest .01 mm) are given for general information only and are based upon 1 inch = 25.4 mm.
2. Measured in the zone beyond .250(6.35 mm) from the seating plane.
3. Variations on dimension B in this zone shall not exceed .010(.25 mm).
4. Outline in this zone is not controlled.
5. When measured in a gaging plane .054+.001,-.000(1.37+.03,-.00 mm) below the seating plane of the transistor, maximum diameter leads shall be within .007(.18 mm) of their true location relative to a maximum width tab. Smaller diameter leads shall fall within the outline of the maximum diameter lead tolerance. Figure 2 shows the preferred measured method.
6. Collector shall be electrically connected to the case.
7. Measured from the maximum diameter of the actual device.
8. All 3 leads.

FIGURE 1. Physical dimensions of transistor types 2N1039 and 2N1041.

L	.0595	.0605	1.51	1.54

NOTES:

1. The following gaging procedure shall be used: The use of a pin straightener prior to insertion in the gage is permissible. The device being measured shall be inserted until its seating plane is .125±.010 (3.18±.25 mm) from the seating surface of the gage. A spacer may be used to obtain the .125 (3.18 mm) distance from the gage seat prior to force application. A force of 8 oz ±.05 oz shall then be applied parallel and symmetrical to the device's cylindrical axis. When examined visually after the force application (the force need not be removed) the seating plane of the device shall be seated against the gage.
2. The location of the tab locator, within the limits of dim C, will be determined by the tab and flange dimension of the device being checked.
3. Metric equivalents (to the nearest .01 mm) are given for general information only and are based upon 1 inch = 25.4 mm.

FIGURE 2. Gage for lead and tab location for transistor types 2N1039 and 2N1041.

4.2 Qualification inspection. Qualification inspection shall consist of the examinations and tests specified in tables I, II, and III. Qualification of the devices shall be as follows:

(a) Qualification inspection may be conducted on any one or more types by individually sampling each as required, or

(b) The manufacturer has the option of qualifying the entire family by the following sampling procedure: One of the three types 2N1039, 2N2553 or 2N2557 and one of the three types 2N1041, 2N2555 or 2N2559 shall be subjected to complete qualification inspection. The required sample size for subgroups 1, 2, 3, 4 and 5 of group B inspection and subgroup 1 of group C inspection may be made up of equal quantities of each of the two types selected provided that they are both in the same case outlines. One transistor type in each case outline (see figures 1, 3 and 4) shall be subjected to the examinations and tests of subgroups 1 and 5 of group B inspection and the thermal resistance test of subgroup 1 of group C inspection. A full required sample of each type (six types) shall be subjected to subgroups 6 and 7 of group B inspection after being subjected to and passing all examinations and tests of group A inspection.

4.3 Quality conformance inspection. Quality conformance inspection shall consist of group A, B, and C inspections.

4.3.1 Group A inspection. Group A inspection shall consist of the examinations and tests specified in table I.

4.3.2 Group B inspection. Group B inspection shall consist of the examinations and tests specified in table II.

4.3.3 Group C inspection. Group C inspection shall consist of the tests specified in table III. This inspection shall be conducted on the initial lot and thereafter every six months during production.

4.3.4 Group B and group C life-test samples. Samples that have been subjected to group B, 340-hours life-test, may be continued on test to 1,000 hours in order to satisfy group C life-test requirements. These samples shall be predesignated, and shall remain subjected to the group C 1,000-hour acceptance evaluation after they have passed the group B, 340-hour acceptance criteria. The cumulative total of failures found during 340-hour test and during the subsequent interval up to 1,000 hours shall be computed for 1,000-hour acceptance criteria, see 4.3.3.

4.4 Methods of examination and test. Methods of examination and test shall be as specified in tables I, II, and III, and as follows:

4.4.1 Resistance to solvents. Transistors shall be subjected to tests in accordance with method 215 of MIL-STD-202. The following details shall apply:

(a) All areas of the transistor body where marking has been applied shall be brushed.

(b) After subjection to the tests there shall be no evidence of mechanical damage to the device and markings shall have remained legible.

4.4.2 Inspection conditions. Unless otherwise specified herein, all inspections shall be conducted at a case temperature (T_C) of 25°C.

5. PREPARATION FOR DELIVERY

5.1 See MIL-S-19500, section 5.

6. NOTES

6.1 Notes. The notes specified in MIL-S-19500 are applicable to this specification.

6.2 Ordering data.

(a) Lead finish if other than gold-plated (see 3.3.1).

(b) Terminal-lead length if other than specified in figures 1, 3, and 4 (see 3.3.2).
