

800mA Low Dropout Fast Response Positive Adjustable Regulator and Fixed  
1.8V, 2.5V and 3.3V

## Features

- Guaranteed Output Voltage Accuracy within 2%
- Fast Transient Response
- Guaranteed Dropout Voltage at Multiple Currents
- Load Regulation : 0.6% Typ.
- Line Regulation : 0.03% Typ.
- Low Dropout Voltage : 1.3V Typ. at  $I_{OUT} = 500mA$
- Current Limit : 0.8A Min. at  $T_J = 125^\circ C$
- On-Chip Thermal Limiting : 150 °C Typ.
- Adjustable Output : 1.25~7.15V
- Standard 3-pin SOT-89, SOT-223,TO-92 and TO-252 Power Packages.

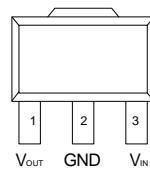

## Applications

- Voltage Regulator for CD-ROM Drivers
- Voltage Regulator for LAN Cards
- Voltage Regulator for mother Boards
- Wireless Communication Systems
- Portable Instrument
- Portable Consumer Equipment
- Low Voltage Systems

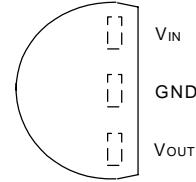

## General Description

The APL1087E is a low dropout three-terminal adjustable regulators with 0.8A output current capability. In order to obtain lower dropout voltage and faster transient response, which is critical for low voltage applications , the APL1087E has been optimized. The device is available in an adjustable version and fixed output voltages of 1.8V, 2.5V and 3.3V, the output available voltage range is from 1.25~7.15V with an input supply below 9V. Dropout voltage is guaranteed at a maximum of 1.45V at 0.5A. Current limit is trimmed to ensure specified output current and controlled short-circuit current. On-chip thermal limiting provides protection against any combination of overload that would create excessive junction temperatures. The APL1087E is available in the industry standard 3-pin SOT-89, SOT-223,TO-92 and TO-252 power packages.

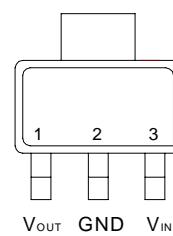

## Pin Description

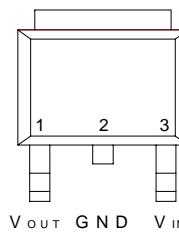

SOT-89 (Front View)

TO-92 (Top View)

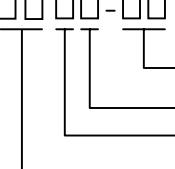

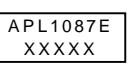

SOT-223 (Front View)

TO-252 (Front View)

## Electrical Characteristics (Cont.)

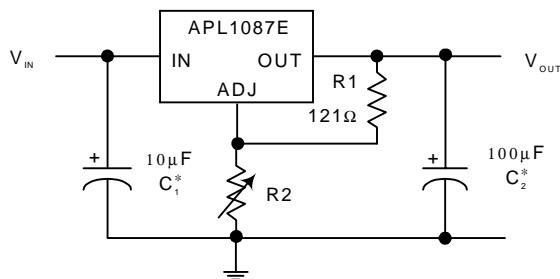

Note 1: See thermal regulation specifications for changes in output voltage due to heating effects. Load line regulations are measured at a constant junction temperature by low duty cycle pulse testing.

Note 2: Dropout voltage is specified over the full output current range of the device. Dropout voltage is defined as the minimum input/output differential measured at the specified output current. Test points and limits are also shown on the Dropout Voltage curve.

Note 3: Minimum load current is defined as the minimum output current required to maintain regulation.

## Application Circuits

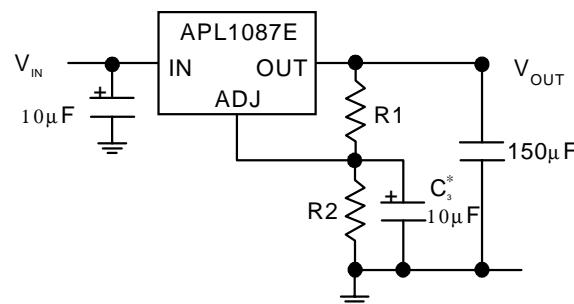

1.25V to 7.15V Adjustable Regulator

\* Needed if device is far from filter capacitors

$$V_{OUT} = 1.250V \times \frac{R1 + R2}{R1}$$

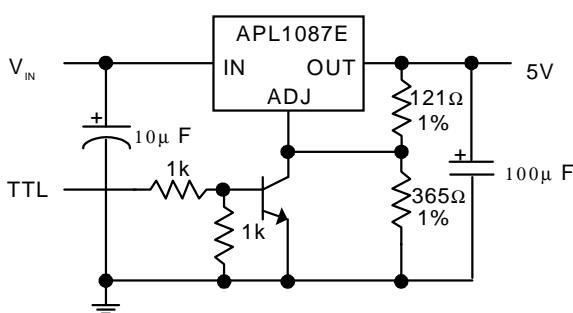

Improving Ripple Rejection

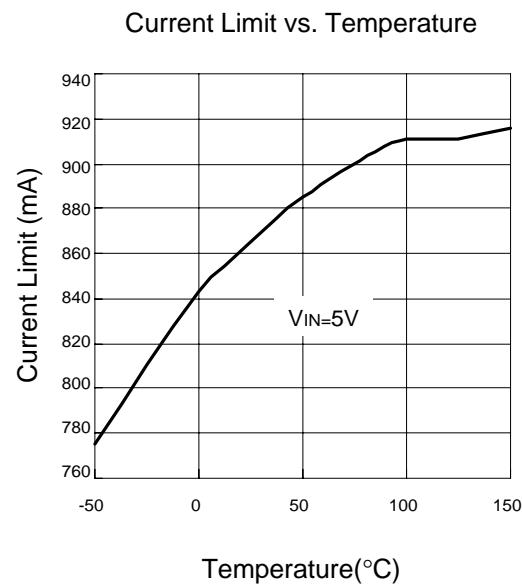

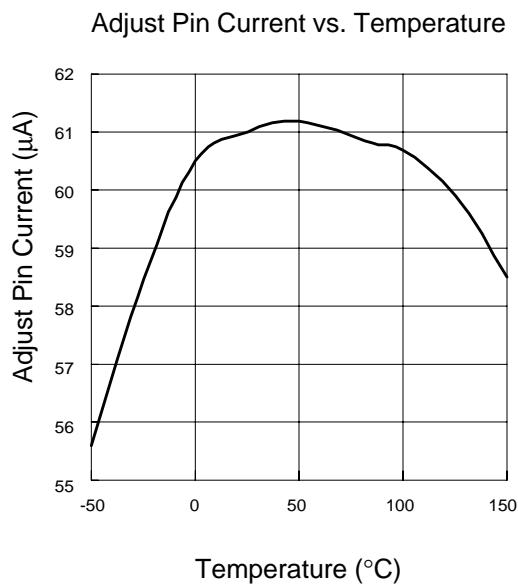

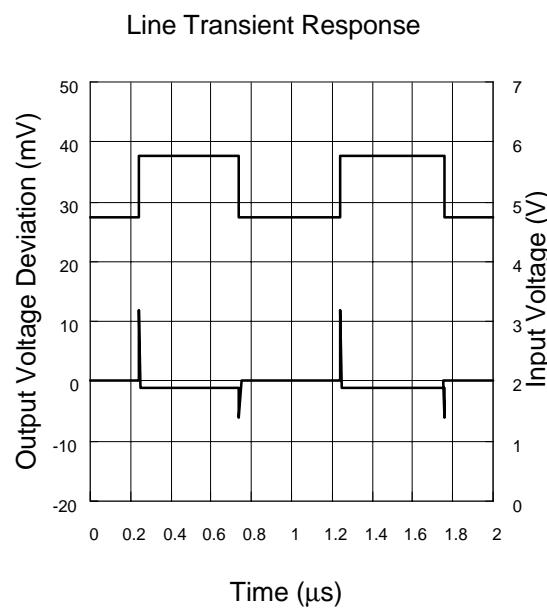

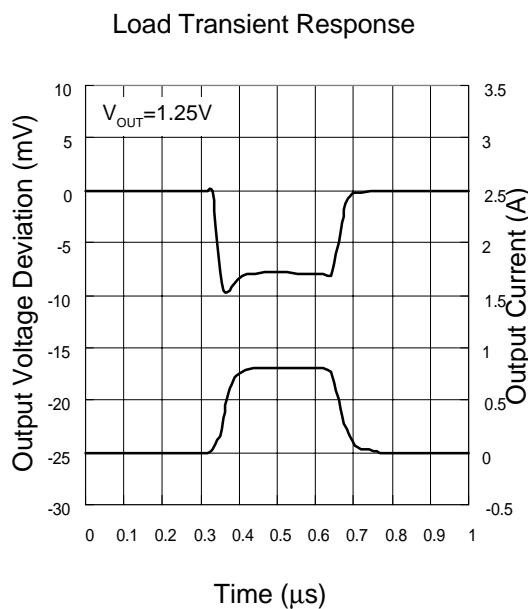

\* C3 improves ripple rejection.

Xc should be approximately equal to R1 at ripple frequency

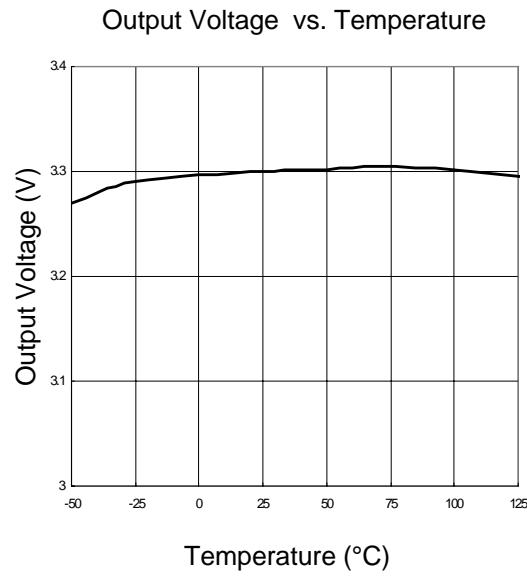

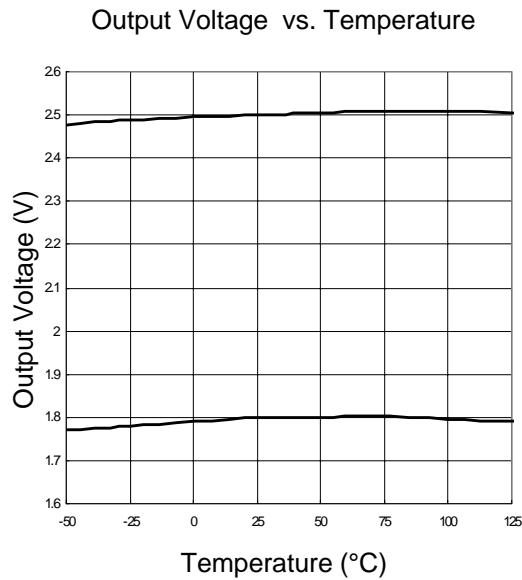

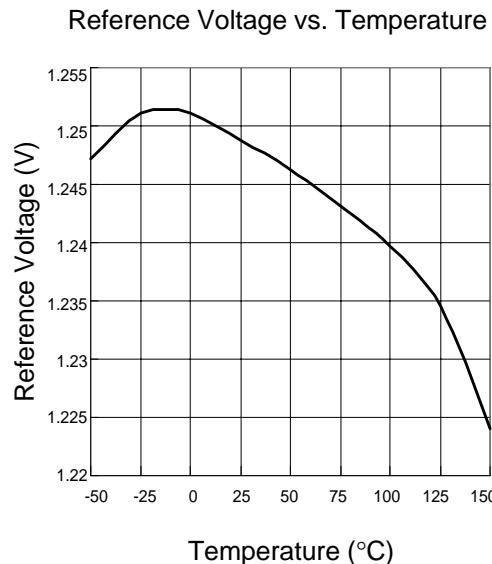

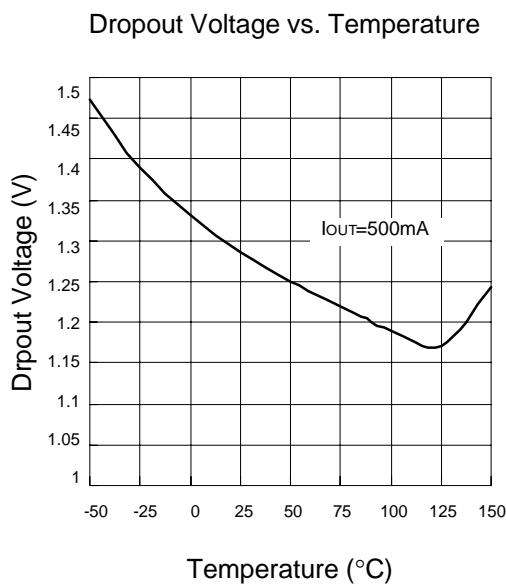

5V Regulator with Shutdown
