- AC Types Feature 1.5-V to 5.5-V Operation and Balanced Noise Immunity at $30 \%$ of the Supply Voltage
- Buffered Inputs
- Incorporate Two Enable Inputs to Simplify Cascading and/or Data Reception
- Speed of Bipolar F, AS, and S, With Significantly Reduced Power Consumption
- Balanced Propagation Delays
- $\pm 24-m A$ Output Drive Current
- Fanout to 15 F Devices
- SCR-Latchup-Resistant CMOS Process and Circuit Design
- Exceeds 2-kV ESD Protection Per MIL-STD-883, Method 3015

## description/ordering information

The'AC139 devices are dual 2-line to 4 -line decoders/demultiplexers designed for $1.5-\mathrm{V}$ to $5.5-\mathrm{V} \mathrm{V}_{\mathrm{CC}}$ operation. These devices are designed to be used in high-performance memory-decoding or data-routing applications requiring very short propagation delay times. In high-performance memory systems, these decoders can be used to minimize the effects of system decoding. When used with high-speed memories utilizing a fast enable circuit, the delay times of these decoders and the enable time of the memory usually are less than the typical access time of the memory. This means that the effective system delay introduced by the decoders is negligible.
The active-low enable ( $\overline{\mathrm{G}}$ ) input can be used as a data line in demultiplexing applications. These decoders/demultiplexers feature fully buffered inputs, each of which represents only one normalized load to its driving circuit.

ORDERING INFORMATION

## PARAMETER MEASUREMENT INFORMATION

$\dagger$ When $\mathrm{V}_{\mathrm{CC}}=1.5 \mathrm{~V}, \mathrm{R} 1=\mathrm{R} 2=1 \mathrm{k} \Omega$
LOAD CIRCUIT

VOLTAGE WAVEFORMS
RECOVERY TIME

VOLTAGE WAVEFORMS
PROPAGATION DELAY AND OUTPUT TRANSITION TIMES

VOLTAGE WAVEFORMS PULSE DURATION

VOLTAGE WAVEFORMS SETUP AND HOLD AND INPUT RISE AND FALL TIMES

VOLTAGE WAVEFORMS
OUTPUT ENABLE AND DISABLE TIMES

NOTES: A. $C_{L}$ includes probe and test-fixture capacitance.
B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
C. All input pulses are supplied by generators having the following characteristics: $\mathrm{PRR} \leq 1 \mathrm{MHz}, \mathrm{Z}_{\mathrm{O}}=50 \Omega, \mathrm{t}_{\mathrm{r}}=3 \mathrm{~ns}, \mathrm{t}_{\mathrm{f}}=3 \mathrm{~ns}$. Phase relationships between waveforms are arbitrary.
D. For clock inputs, $f_{\max }$ is measured with the input duty cycle at $50 \%$.
E. The outputs are measured one at a time with one input transition per measurement.
F. tpLH and tpHL are the same as tpd.
G. tPZL and tPZH are the same as ten.
H. tPLZ and tPHZ are the same as $\mathrm{t}_{\text {dis }}$.
I. All parameters and waveforms are not applicable to all devices.
